

**UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF NEW YORK**

Dominick Volino et al., v. Progressive Casualty Ins. Co. et al.
Michael Verardo et al. v. Progressive Casualty Ins. Co. et al.

Case Nos. 21-cv-6243, 22-cv-01714

DECLARATION OF BRIAN T. FITZPATRICK

I. BACKGROUND AND QUALIFICATIONS

1. I am the Milton R. Underwood Chair in Free Enterprise and Professor of Law at Vanderbilt University in Nashville, Tennessee. I joined the Vanderbilt law faculty in 2007, after serving as the John M. Olin Fellow at New York University School of Law in 2005 and 2006. I graduated from the University of Notre Dame in 1997 and Harvard Law School in 2000. After law school, I served as a law clerk to The Honorable Diarmuid O'Scannlain on the United States Court of Appeals for the Ninth Circuit and to The Honorable Antonin Scalia on the United States Supreme Court. I also practiced law for several years in Washington, D.C., at Sidley Austin LLP. My C.V. is attached as Exhibit 1-A. I speak only for myself and not for Vanderbilt.

2. My teaching and research at Vanderbilt have focused on class action litigation. I teach the Civil Procedure, Federal Courts, and Complex Litigation courses. In addition, I have published numerous articles on class action litigation in such journals as the University of Pennsylvania Law Review, the Journal of Empirical Legal Studies, the Vanderbilt Law Review, the NYU Journal of Law & Business, the Fordham Law Review, and the University of Arizona Law Review. My work has been cited by numerous courts, scholars, and media outlets, including the New York Times, USA Today, and Wall Street Journal. I have been invited to speak about class action litigation at symposia and other events, such as the ABA National Institute on Class Actions in 2011, 2015, 2016, 2017, 2019, 2023, and 2024, as well as the ABA Annual Meeting in

2012 and 2022. Since 2010, I have also served on the Executive Committee of the Litigation Practice Group of the Federalist Society for Law & Public Policy Studies. In 2015, I was elected to membership in the American Law Institute.

3. In December 2010, I published an article in the *Journal of Empirical Legal Studies* entitled *An Empirical Study of Class Action Settlements and Their Fee Awards*, 7 J. Empirical L. Stud. 811 (2010) (hereinafter “*Empirical Study*”). This article is still the most comprehensive examination of federal class action settlements and attorneys’ fees that has ever been published. Unlike other studies of class actions, which have been confined to one subject matter or have been based on samples of cases that were not intended to be representative of the whole (such as settlements approved in published opinions), my study attempted to examine *every* class action settlement approved by a federal court over a two-year period (2006-2007). *See id.* at 812-13. As such, not only is my study an unbiased sample of settlements, but the number of settlements included in my study is also several times greater than the number of settlements per year that has been identified in any other empirical study of class action settlements: Over this two-year period, I identified 688 settlements, including 109 from the Second Circuit alone. *See id.* at 817. I presented the findings of my study at the Conference on Empirical Legal Studies at the University of Southern California School of Law in 2009, the Meeting of the Midwestern Law and Economics Association at the University of Notre Dame in 2009, and before the faculties of many law schools in 2009 and 2010. Since then, this study has been relied upon regularly by courts, scholars, and testifying experts.¹ I have attached this study as Exhibit 1-B and will draw upon it in this declaration.

4. In addition to my empirical works, I have also published many law-and-economics papers on the incentives of attorneys and others in class action litigation. *See, e.g.*, Brian T. Fitzpatrick, *A Fiduciary Judge's Guide to Awarding Fees in Class Actions*, 89 Fordham L. Rev. 1151 (2021) (hereinafter "*A Fiduciary Judge*"); Brian T. Fitzpatrick, *Do Class Action Lawyers Make Too Little*, 158 U. Pa. L. Rev. 2043 (2010) (hereinafter "*Class Action Lawyers*"); Brian T. Fitzpatrick, *The End of Objector Blackmail?*, 62 Vand. L. Rev. 1623 (2009). Much of this work was discussed in a book I authored, published by the University of Chicago Press, entitled *THE CONSERVATIVE CASE FOR CLASS ACTIONS* (2019). The book's thesis is that the so-called "private attorney general" model of class actions is superior to the public attorney general in the enforcement of the rules that free markets need in order to operate effectively and, for that reason, courts should provide proper incentives to encourage such private attorney general behavior. I will also draw upon this work in this declaration.

5. I have been asked by Class Counsel to opine on whether their request for fees and service awards are reasonable given the empirical studies and research on economic incentives in class action litigation. To formulate my opinion, I reviewed numerous documents, a list of which is attached as Exhibit 1-C.

Supp. 2d 437, 444-46 & n.8 (E.D.N.Y. 2014) (same); *In re Fed. Nat'l Mortg. Association Sec., Derivative, and "ERISA" Litig.*, 4 F. Supp. 3d 94, 111-12 (D.D.C. 2013) (same); *In re Vioxx Prod. Liab. Supp. 2d 297, 359 (E.D.N.Y. 2010) (same).

6. As I explain, based on the empirical studies and research on economic incentives, this is one of the top class action settlements I have seen in my nearly 20 years of studying them: It was reached after litigating all the way through summary judgment to the eve of trial; it recovers the vast majority of the class's potential damages; and it will be automatically distributed without the use of claim forms and with no funds reverting to the defendants. Settlements rarely recover such a significant portion of potential damages; class actions rarely are litigated to the eve of trial, through dispositive motions on the pleadings and at summary judgment, and after securing class certification and surviving a 23(f) petition on appeal; and settlements rarely provide compensation directly with no claim-submission process or action required by class members and with no remainder. Certainly, settlements that do *all three* are particularly rare.

7. Under these circumstances, Class Counsel's requests for 33.3% of the settlement amount in attorneys' fees and for \$10,000.00 to each class representative as a service award are more than reasonable.

II. CASE BACKGROUND

8. This settlement arises out of litigation against Progressive and its related entities for breach of contract and deceptive and misleading practices by discounting the total-loss value of plaintiffs' vehicles by adjusting for what they think consumers will negotiate off the advertised price of used cars. The litigation began in July 2021. Class counsel have thus far: survived the motion to dismiss, succeeded in certifying multiple classes and subclasses, survived a Rule 23(f) petition seeking to undo the certification, survived motions to exclude their experts, and survived the motion for summary judgment. After almost completely working the case up for trial—including briefing all evidentiary motions and submitting their voir dire questions, jury instructions, verdict forms, witness lists, and exhibit lists—the parties reached a settlement roughly

one month before the trial was scheduled to begin. On August 20, 2024, the Court preliminarily approved the settlement and extended the class period of the previously-certified classes through that date. The parties are now asking the Court to grant final approval of the settlement, and Class Counsel is seeking an award of fees and expenses.

9. The two Settlement Classes include, with minor exceptions, “[a]ll persons who made a [] claim on a policy of insurance by any Progressive Group entity to a New York resident who received compensation . . . for the total loss of a covered vehicle, where that compensation was based on an Instant Report prepared by Mitchell International, Inc., and the actual cash value was decreased based on Projected Sold Adjustments” Amended Settlement Agreement ¶¶ 1.c-d. (For reasons related to statutes of limitations, the first-party class includes such claims from July 28, 2015, and the third-party class from July 20, 2018. *See id.*) With exceptions for the claims in two other lawsuits against Progressive and for personal injury, medical payments, and uninsured-underinsured motorist payments, the classes will release Progressive and its entities from “any and all claims” in “any way arising out of or relating in any way to the facts and circumstances alleged,” including “any claims arising out of Progressive’s settlement of a total-loss claim.” *Id.* at ¶ 12. In exchange, Progressive will pay \$48,000,000.00 in cash that, after the deduction of attorneys’ fees, expenses, settlement administration expenses, and service awards, will be automatically distributed pro rata to Class Members based on their potential damages recovery by whatever method they select (check or electronic), but without any need for claim forms. *See id.* at ¶¶ 7, 10. No amount of this money can revert to Progressive; instead, the money will be redistributed to Class Members until none remains. *See id.* at ¶ 10.b.

10. Class Counsel are seeking a fee award of one-third of the settlement, as well as a service award of \$10,000.00 for each class representative. As I explain below, it is my opinion

that these requests are more than reasonable given the empirical studies of class actions and the research on economic incentives in class action litigation.

III. ASSESSMENT OF THE REASONABLENESS OF THE REQUEST FOR ATTORNEYS' FEES

11. When a class action reaches settlement or judgment, no fee shifting statute is triggered, and the defendant has not agreed to pay class counsel's fees, class counsel is paid by the class members themselves pursuant to the common law of unjust enrichment. This is sometimes called the "common fund" or "common benefit" doctrine. It requires the court to decide how much of their class action proceeds it is fair to ask class members to pay to class counsel.

12. At one time, courts that awarded fees in common fund class action cases did so using the familiar "lodestar" method. *See Fitzpatrick, Class Action Lawyers, supra*, at 2051. Under this approach, courts awarded class counsel a fee equal to the number of hours they worked on the case (to the extent the hours were reasonable), multiplied by a reasonable hourly rate, as well as by a discretionary multiplier that courts often based on the risk of non-recovery and other factors. *See id.* Over time, however, the lodestar approach fell out of favor in common fund class actions (properly so, in my opinion). It did so largely for two reasons. First, courts came to dislike the lodestar method because it is difficult to calculate and it requires reviewing voluminous time records and the like. Second—and more importantly—many courts came to dislike the lodestar method because it does not align class counsel's interests with those of the class: Class counsel's recovery under the lodestar method does not depend on how much the class recovers, but, rather, on the number of hours class counsel spends on the case. That is, the lodestar method rewards dragging cases out to churn up hours and discourages timely settlements, neither of which are in class members' interest. *See id.* at 2051-52.

13. According to *Empirical Study*, the lodestar method is now used to award fees in only a small percentage of class action cases. *See* Fitzpatrick, *Empirical Study*, *supra*, at 832 (finding the lodestar method used in only 12% of settlements). Other large-scale academic studies of class action fees, authored by Geoff Miller and the late Ted Eisenberg, agree with my findings. *See* Theodore Eisenberg et al., *Attorneys' Fees in Class Action Settlements: 2009-2013*, 92 N.Y.U. L. Rev. 937, 945 (2017) (“Eisenberg-Miller 2017”) (finding lodestar method used less than 7% of the time since 2009); Theodore Eisenberg & Geoffrey P. Miller, *Attorneys' Fees and Expenses in Class Action Settlements: 1993-2008*, 7 J. Empirical L. Stud. 248, 267 (2010) (“Eisenberg-Miller 2010”) (finding lodestar method used only 13.6% of the time before 2002 and less than 10% of the time thereafter and before 2009).

14. The more common method of calculating attorneys' fees today is known as the “percentage-of-the-fund” or “percentage” method. Under this approach, courts select a percentage of the settlement fund they believe is fair to class counsel, multiply the settlement amount by that percentage, and then award class counsel the resulting product. The percentage approach has become the preferred method for awarding fees to class counsel in common fund cases precisely because it corrects the deficiencies of the lodestar method: It is less cumbersome to calculate, and, more importantly, it aligns the interests of class counsel with the interests of the class because the more the class recovers, the more class counsel recovers. *See* Fitzpatrick, *Class Action Lawyers*, *supra*, at 2052. This is why private parties—including sophisticated corporations—that hire lawyers on a contingency basis almost always use the percentage method over the lodestar method as the fee arrangement. *See, e.g.*, David L. Schwartz, *The Rise of Contingent Fee Representation in Patent Litigation*, 64 Ala. L. Rev. 335, 360 (2012); Herbert M. Kritzer, RISKS, REPUTATIONS, AND REWARDS 39-40 (1998).

15. In the Second Circuit, courts have discretion to use either the lodestar method or the percentage method in awarding attorneys' fees in common fund class actions. *See Goldberger v. Integrated Resources, Inc.*, 209 F.3d 43, 45 (2d Cir. 2000) (“[E]ither the lodestar or percentage of the recovery methods may properly be used to calculate fees in common fund cases.”). But, “[t]he trend in this Circuit is toward the percentage method” *Wal-Mart Stores, Inc. v. Visa U.S.A., Inc.*, 396 F.3d 96, 121 (2d Cir. 2005). Given the well-recognized disadvantages of the lodestar method and the well-recognized advantages of the percentage method, it is my opinion that the percentage method should be used whenever the value of the settlement or judgment can be reliably calculated; the lodestar method should be used only where the value cannot be reliably calculated and the percentage method is therefore not feasible or when the method is required by law, such as by a fee-shifting statute. This is not just my view; it is also the view of leading class action scholars. *See Principles of the Law of Aggregate Litigation* § 3.13 (2010) (cmt. b) (“Although many courts in common-fund cases permit use of either a percentage-of-the-fund approach or a lodestar . . . most courts and commentators now believe that the percentage method is superior.”).

16. In this case, the \$48 million settlement amount is entirely cash—i.e., there are no coupons or practice changes to value. Indeed, there is nothing to estimate or calculate here—Progressive is indisputably providing a specific, hard dollar amount as the settlement fund. Thus, it is not merely that it is easy to calculate the settlement value here—that value (\$48 million) is incontestable. As such, it is my opinion that this case is clearly one where the percentage method should be used. Indeed, if there is ever a settlement in which it is appropriate to use the percentage method and inappropriate to use the lodestar method, this settlement, in my opinion, is it. I will therefore proceed under that method.

17. When selecting or approving the percentage of the fund to provide as attorneys' fees, courts usually examine a number of factors. *See Fitzpatrick, Empirical Study, supra*, at 832. In the Second Circuit, courts consider the following factors: "(1) the time and labor expended by counsel; (2) the magnitude and complexities of the litigation; (3) the risk of the litigation . . . ; (4) the quality of representation; (5) the requested fee in relation to the settlement; and (6) public policy considerations." *Goldberger*, 209 F.3d at 50. In my opinion, the fee requested here is more than reasonable because it is strongly supported by all six of these factors.

18. Consider the last factor: "(6) public policy considerations." As I explain in my book *THE CONSERVATIVE CASE FOR CLASS ACTIONS*, class action lawyers perform a critical law enforcement role in our country—which is why they are often referred to as "private attorneys general." In Europe, countries rely much more on the government to police the marketplace. In America, by contrast, we believe more strongly in self-help and the private sector, including to police the marketplace. That is, we need private class action lawyers because it is not desirable from a public policy perspective for "public" attorneys general to police all wrongdoing. And even if it were desirable, it is simply not possible: "public" attorneys general have very limited resources. It is also impossible for individual litigants to police all wrongdoing: Sometimes individual claims are too small to be economically rational (or even viable) to bring on their own (meaning no individual cases would be brought at all), and, even when they are viable, individuals do not have the incentive to invest in one claim the same way a defendant facing many similar claims does. As a result, the playing field between individual plaintiffs and defendants is often not level. *See Fitzpatrick, Class Action Lawyers, supra*, at 2059. Class action lawyers level the playing field and overcome the enforcement gap that would otherwise exist in our country by aggregating non-viable and/or underinvested claims into effective litigation vehicles. *See id.*

19. There is no doubt that, here, the class members could not have pursued Progressive on their own; the claims are simply too small. Although it was not impossible for the government to do so, the government has thus far done nothing. Thus, without Class Counsel's efforts, there would have been no accountability here at all. But lawyers are rational economic actors like anyone else: They will only bring lawsuits and optimally invest in them if they are compensated adequately. The fee decisions courts make at the end of successful class actions tell lawyers in future cases what they can expect to receive if they invest in a new case and ultimately win it. Accordingly, in my opinion, courts should set fee awards such that future lawyers will make the best decisions about what cases to file and how to resolve them. In my view, this means courts should set fees such that lawyers are incentivized 1) to bring as many *meritorious* cases as possible and 2) to litigate those cases in a way that maximizes the resulting compensation for the class and the deterrence of future wrongdoing.

20. There is little doubt that this case has merit: it survived both the motion to dismiss *and* the motion for summary judgment. Very few class actions survive both those motions before reaching settlement. Indeed, a forthcoming empirical study I am conducting will demonstrate that this number is approximately 9% of non-securities class actions.

21. Moreover, there is no doubt Class Counsel's settlement will generate both compensation and deterrence: Class Members will receive millions of dollars of compensation—indeed, they will receive the lion's share of their damages, again a rarity in class action settlements—and every one of these dollars increases Progressive's cost of engaging in misconduct. In my opinion, it is important to incentivize class counsel to generate compensation and deterrence like this and, as such, the "public policy" factor therefore strongly supports the fee request.

22. Consider next the fifth factor, “(5) the requested fee in relation to the settlement.”

A fee award of one-third would be above average but well within the mainstream and easily justified given the circumstances of this litigation and the extraordinary recovery for the Class Members. According to my empirical study, the most common percentages awarded by federal courts nationwide using the percentage method were 25%, 30%, and one-third, with a mean award of 25.4% and a median award of 25%. *See Fitzpatrick, Empirical Study, supra*, at 833-34, 838. The other large-scale academic studies of class action fees, authored by Geoff Miller and the late Ted Eisenberg, are in accord, *see Theodore Eisenberg & Geoffrey P. Miller, Attorneys’ Fees and Expenses in Class Action Settlements: 1993-2008*, 7 J. Empirical L. Stud. 248, 260 (2010) (“*Eisenberg-Miller 2010*”) (finding mean and median of 24% and 25%, respectively), if not trending even higher: their most recent study reported a mean of 27% and a median of 29%, *see Theodore Eisenberg et al., Attorneys’ Fees in Class Action Settlements: 2009-2013*, 92 N.Y.U. L. Rev. 937, 951 (2017) (“*Eisenberg-Miller 2017*”). This can be shown graphically. In Figure 1, below, I depict the distribution of all the percentage-method fee awards in my study. The Figure shows what fraction of settlements (y-axis) had fee awards within each five-point range of fee percentages (x-axis); each bar includes the number on its left edge and excludes the number on its right edge. I included an arrow depicting where this fee request falls. As the Figure shows, even though this fee request may be above average, it is still commonplace—indeed, it is in the most commonplace column in the Figure.

Figure 1: Percentage-method fee awards among all federal courts, 2006-2007

23. The same is true when looking at fee awards in the Second Circuit alone. In the 72 settlements in my study from the Second Circuit where the percentage method was used, the mean and median were 23.8% and 24.5%, respectively. *See Fitzpatrick, Empirical Study, supra*, at 836. But this time the most *common* fee percentage—the mode—was actually one-third. Again, the Eisenberg-Miller studies found much the same thing, but, again, with percentages trending higher. *See Eisenberg-Miller 2010, supra*, at 260 (finding mean and median of 23% and 24%, respectively in the Second Circuit); *Eisenberg-Miller 2017, supra*, at 951 (finding mean and median in the Second Circuit of 28% and 30%, respectively). This can be seen graphically in Figure 2, which shows the distribution of Second Circuit percentage-method fee awards in my study. As the figure shows, fee awards of one-third are again in the most commonplace part of the distribution. (The published data in the Eisenberg-Miller studies are not detailed enough to allow me to report the

mode or create a similar graphic, but given that the averages and medians in those studies are either near or, in the most recent study, above mine, I suspect a graphic from those studies would look much like Figures 1 and 2, but perhaps with the bars shifted somewhat rightward (i.e. toward even higher fee percentages)).

Figure 2: Percentage-method fee awards in the Second Circuit, 2006-2007

24. It is true that this settlement is large, but it is not so large to trigger the practice that some courts follow to cut percentages in so-called “megafund” settlements. This can be seen from the fee percentages in the relevant settlement size ranges reported in my study and the Eisenberg-Miller studies:

- In settlements between \$30 million and \$72.5 million, I found a mean and median very similar to the overall mean and median: 22.3% and 24.9%, respectively. *See Fitzpatrick, Empirical Study, supra*, at 839.

- In settlements between \$38.3 million and \$69.6 million, the older Eisenberg-Miller study found a mean and median a bit lower: 20.5% and 21.9%, respectively. *See Eisenberg-Miller 2010, supra*, at 260.
- But in their newer study, Eisenberg-Miller found a higher mean in settlements between \$23.5 million and \$67.5 million: over 24%. *See Eisenberg-Miller 2017, supra*, at 948.

Thus, in my opinion, the mean and median fee percentages in settlements around \$48 million are very similar to the mean and medians overall. As such, the distribution of the fee percentages in settlements around \$48 million very likely looks much like Figures 1 and 2, above.

25. To summarize this factor, no matter how you slice it, this request is for an above average yet common fee percentage—even though it achieves an uncommon result. As I previously opined in paragraph 5, this is one of the top settlements I have ever seen in 20 years of reviewing and studying class action settlements. As I explain further below, this settlement was reached after unusual procedural maturity and it recovered an unusually large fraction of the class’s damages. Obviously, some of the fee award percentages analyzed in the empirical studies discussed above were in cases much less favorable to the class than the settlement here. As such, in my opinion, this case easily justifies an award on the higher end of the spectrum, especially when the requested fee is the most commonly awarded fee in the Second Circuit.

26. Consider next the factors that speak to the results obtained by class counsel in light of the risks presented by the litigation: “(2) the magnitude and complexities of the litigation; (3) the risk of the litigation[, and] (4) the quality of representation.” In my opinion, these factors strongly support class counsel’s fee request. To put it frankly, very few class action settlements recover anywhere near 69% of the class’s best-case damages. Although we don’t have good data

yet on consumer class actions like this one—I hope my forthcoming empirical study will correct this deficiency—the data we do have, from securities cases and antitrust cases, suggests that the recovery here is *multiples* of what is typically recovered in a class action settlement. *See, e.g., Recent Trends in Securities Class Action Litigation: 2023 Full-Year Review*, at p. 26 (fig. 22), available at <https://www.nera.com/content/nera/us/en/insights/publications/2024/recent-trends-in-securities-class-action-litigation--2023-full-y.html> (showing, over the last decade, the median securities fraud class action has recovered between 1.5% and 2.5% of investor losses depending on the year); John M. Connor & Robert H. Lande, *Not Treble Damages: Cartel Recoveries are Mostly Less Than Single Damages*, 100 Iowa L. Rev. 1997, 2010 (2015) (finding the weighted average of recoveries—the authors’ preferred measure—to be 19% of single damages for cartel cases between 1990 to 2014). In light of the risks the Classes faced—not only at trial, but on appeal after trial—it is hard to conclude that the recovery here is anything other than spectacular.

27. Indeed, this is all the more so because the Class Members will receive their share of the settlement automatically without any need to submit a claim form. Although I have seen this distribution technique before, *see generally* Brian T. Fitzpatrick & Robert Gilbert, *An Empirical Look at Compensation in Consumer Class Actions*, 11 NYU J. L. & Bus. 767 (2015), it is rare, and I have never seen it used where the electronic payments will exhaust the settlement and leave no remainder.

28. When considering these factors—the risk of litigation, quality of representation, and the complexity of litigation—it is also important to consider that Class Counsel developed the case theory and evidence necessary to prosecute the case successfully. This was the first case Class Counsel filed challenging Progressive’s application of Projected Sold Adjustments. Since then, they have filed cases across the country bringing claims essentially identical to the ones they first

developed in this case. Prior to this case—and the companion cases across the country—there was no case law on the theories of liability brought here. There was no path to follow, no briefs or discovery forms to use as templates, no deposition testimony to study, no case law to account for. Indeed, other class cases challenging total-loss valuations under different theories had failed. To achieve unusually excellent results should be rewarded even in the normal course of events, but to do so with an innovative and unprecedented theory of liability and course of litigation is even more worthy.

29. To summarize this factor, this is the kind of innovative representation that, harkening back to the public-policy factor above, the Court should reward. In my opinion, these factors therefore strongly support a fee of one third.

30. Consider finally the factor “(1) the time and labor expended by counsel.” Again, this factor strongly supports the fee request. This case has lasted longer than the typical class action, which reaches final approval in less than three years, *see Fitzpatrick, Empirical Study, supra*, at 820. The reason for this is because class counsel litigated this case much further than most class action lawyers would have. Very few non-securities class actions these days are settled after a contested class certification motion; almost all of them settle before certification and are certified for settlement purposes only. Indeed, my forthcoming study will put that number at *over 90%*. Even more exceptional, as I noted above, very few class actions survive both a motion to dismiss and summary judgment, and even fewer are litigated to the eve of trial. Indeed, given the procedural maturity, I am surprised this case reached settlement as quickly as it did, as most cases this developed would take many years. That this case matured (and then settled) so quickly is a testament to the vigilance of Class Counsel and the Court. Of all the Second Circuit’s fee factors, this one, in my opinion, is the one that most strongly favors an upper-end fee percentage. The

reason for this is as follows: If class action lawyers receive the same fee percentage when they settle early as they do when they go all the way to the eve of trial, then they will never go to the eve of trial; they will settle early for less. *See* Bruce L. Hay, *Optimal Contingent Fees in A World of Settlement*, 26 J. Legal Stud. 259, 259 (1997). This is why many clients in the market for contingency representation choose fee percentages that escalate as the litigation matures. *See* Fitzpatrick, *A Fiduciary Judge*, *supra*, at 1160-61. Class Counsel not only declined to settle early, they also did not let the case drag on—instead, they litigated thoroughly but quickly, and then secured a favorable settlement. In my opinion, the Court should look favorably on this approach.

31. Sometimes courts go on to consider class counsel’s lodestar under this factor and “crosscheck” it against the fee percentage counsel have requested. I have never favored this approach because, harkening back to the public-policy factor, I believe it gives counsel bad incentives for the same reasons the lodestar method did—this is why no real clients ever use it, *see* Fitzpatrick, *A Fiduciary Judge*, *supra*, at 1157-58, 1167. That said, I recognize the Second Circuit “encourage[s]” the lodestar crosscheck, *see, e.g., Goldberger*, 209 F.3d at 50, so I will address it here. Class counsel have reported that their fee request would result in a multiplier of either 2.92 (if no time is credited for work to be performed in conducting, overseeing, and implementing the proposed Settlement Agreement) or 2.86 (if such estimated time is counted). According to my empirical study, courts that did the crosscheck awarded percentages that resulted in multipliers ranging from .07 to 10.3 with a mean of 1.65 and a median of 1.34. *See* Fitzpatrick, *Empirical Study*, *supra*, at 834. The Eisenberg-Miller studies found much the same. *See Eisenberg-Miller 2010*, *supra*, at 272 (finding mean multiplier of 1.81 before 2009); *Eisenberg-Miller 2017*, *supra*, at 965 (finding mean multiplier of 1.48 since 2009). But Eisenberg-Miller also found that multipliers tend to increase with settlement size faster than percentages decline. (I did not examine

that question in my study.) Thus, for example, their latest study found a mean and median multiplier of 1.65 and 1.5, respectively, for settlements between \$23.4 million and \$67.5 million, *see Eisenberg-Miller 2017, supra*, at 967, and their older study found a mean and median 1.98 and 1.75, respectively, for settlements between \$38.3 million and \$69.6 million, *see Eisenberg-Miller 2010, supra*, at 274. But, importantly, multipliers can go much, much higher. *See, e.g., Asare v. Change Grp. of N.Y., Inc.*, 2013 U.S. Dist. LEXIS 165935 at *51 (S.D.N.Y. Nov. 15, 2013) (“Typically, courts use multipliers of 2 to 6 times the lodestar.”); *Beckman v. KeyBank, N.A.*, 293 F.R.D. 467, 482 (S.D.N.Y. 2013) (approving attorneys’ fees representing a 6.3 times multiplier on class counsel’s regular hourly rates); *In re Credit Default Swaps Antitrust Litig.*, 2016 U.S. Dist. LEXIS 54587, at *53-54 (S.D.N.Y. Apr. 25, 2016) (approving attorneys’ fees reflecting a “lodestar multiplier of just over 6.”). How high is “too high” is a difficult question without a rationale for the lodestar crosscheck to begin with. The most common rationale is that the crosscheck is needed to prevent lawyers from generating so-called “windfalls”—quick, lowball settlements that nonetheless generate hefty fees on an hourly basis. This rationale never made much sense to me—other factors already examine the quality of the settlement—but, even taking the rationale at face value, this concern is obviously absent here. Nothing about this settlement was quick; it was hard fought all the way to the eve of trial. As I noted, few class action lawyers take their cases as far as class counsel did here. Thus, in my opinion, this factor too strongly supports the fee request.

32. For all these reasons, it is my opinion that the fee request here is reasonable in light of the empirical studies and research on economic incentives in class action litigation.

IV. ASSESSMENT OF THE REASONABLENESS OF THE REQUEST FOR SERVICE AWARDS

33. Class counsel have requested service awards of \$10,000.00 for each of the class representatives. These requests are well within the mainstream. There have been several good

empirical studies of service awards and they all find that the median award tends to be around \$5,000.00 per class representative while the mean exceeds \$10,000.00. *See, e.g.,* Theodore Eisenberg & Geoffrey P. Miller, *Incentive Awards to Class Action Plaintiffs: An Empirical Study*, 53 UCLA L. Rev. 1303, 1334 (2006) (finding a median of \$4,300.00 and a mean of almost \$16,000.00); William Rubenstein, 5 Newberg & Rubenstein on Class Actions § 17:8 (5th ed. 2024) (finding a median of over \$5,000.00 and a mean of nearly \$12,000.00 in 2011 dollars). These studies are both quite old now and inflation would suggest much larger figures today. As such, the requests here are well below average in today's dollars.

34. Although it is true Eisenberg and Miller found that service awards in consumer cases tend to be lower, *see* Eisenberg & Miller, *Incentive Awards, supra*, at 1334, as I noted above, very few class actions get to the eve of trial like this one did. Insofar as service awards should compensate class representatives for the burden they take on for the class, the far more advanced maturity of this case suggests the awards should be upper-end awards. This is not just a matter of fairness to the representatives, but also a matter of good incentives for the class action system: If we fail to compensate representatives for the special burdens they take on, it will be hard to find representatives to serve in the future. And without representatives, there will be no class actions.

35. For all these reasons, it is my opinion that the service awards requested by class counsel are in line with the empirical studies and research on economic incentives in class action litigation.

36. My compensation for this declaration was a flat fee in no way dependent on the outcome of class counsel's fee petition.

An Empirical Study of Class Action Settlements and Their Fee Awards

*Brian T. Fitzpatrick**

This article is a comprehensive empirical study of class action settlements in federal court. Although there have been prior empirical studies of federal class action settlements, these studies have either been confined to securities cases or have been based on samples of cases that were not intended to be representative of the whole (such as those settlements approved in published opinions). By contrast, in this article, I attempt to study every federal class action settlement from the years 2006 and 2007. As far as I am aware, this study is the first attempt to collect a complete set of federal class action settlements for any given year. I find that district court judges approved 688 class action settlements over this two-year period, involving nearly \$33 billion. Of this \$33 billion, roughly \$5 billion was awarded to class action lawyers, or about 15 percent of the total. Most judges chose to award fees by using the highly discretionary percentage-of-the-settlement method, and the fees awarded according to this method varied over a broad range, with a mean and median around 25 percent. Fee percentages were strongly and inversely associated with the size of the settlement. The age of the case at settlement was positively associated with fee percentages. There was some variation in fee percentages depending on the subject matter of the litigation and the geographic circuit in which the district court was located, with lower percentages in securities cases and in settlements from the Second and Ninth Circuits. There was no evidence that fee percentages were associated with whether the class action was certified as a settlement class or with the political affiliation of the judge who made the award.

I. INTRODUCTION

Class actions have been the source of great controversy in the United States. Corporations fear them.¹ Policymakers have tried to corral them.² Commentators and scholars have

Research for this article was supported by Vanderbilt's Cecil D. Branstetter Litigation & Dispute Resolution Program and Law & Business Program. I am grateful for comments I received from Dale Collins, Robin Effron, Ted Eisenberg, Deborah Hensler, Richard Nagareda, Randall Thomas, an anonymous referee for this journal, and participants at workshops at Vanderbilt Law School, the University of Minnesota Law School, the 2009 Meeting of the Midwestern Law and Economics Association, and the 2009 Conference on Empirical Legal Studies. I am also grateful for the research assistance of Drew Dörner, David Dunn, James Gottry, Chris Lantz, Gary Peebles, Keith Randall, Andrew Yi, and, especially, Jessica Pan.

¹See, e.g., Robert W. Wood, *Defining Employees and Independent Contractors*, *Bus. L. Today* 45, 48 (May–June 2008).

²See Private Securities Litigation Reform Act (PSLRA) of 1995, Pub. L. No. 104-67, 109 Stat. 737 (codified as amended in scattered sections of 15 U.S.C.); Class Action Fairness Act of 2005, 28 U.S.C. §§ 1453, 1711–1715 (2006).

suggested countless ways to reform them.³ Despite all the attention showered on class actions, and despite the excellent empirical work on class actions to date, the data that currently exist on how the class action system operates in the United States are limited. We do not know, for example, how much money changes hands in class action litigation every year. We do not know how much of this money goes to class action lawyers rather than class members. Indeed, we do not even know how many class action cases are resolved on an annual basis. To intelligently assess our class action system as well as whether and how it should be reformed, answers to all these questions are important. Answers to these questions are equally important to policymakers in other countries who are currently thinking about adopting U.S.-style class action devices.⁴

This article tries to answer these and other questions by reporting the results of an empirical study that attempted to gather all class action settlements approved by federal judges over a recent two-year period, 2006 and 2007. I use class action settlements as the basis of the study because, even more so than individual litigation, virtually all cases certified as class actions and not dismissed before trial end in settlement.⁵ I use federal settlements as the basis of the study for practical reasons: it was easier to identify and collect settlements approved by federal judges than those approved by state judges. Systematic study of class action settlements in state courts must await further study;⁶ these future studies are important because there may be more class action settlements in state courts than there are in federal court.⁷

This article attempts to make three contributions to the existing empirical literature on class action settlements. First, virtually all the prior empirical studies of federal class action settlements have either been confined to securities cases or have been based on samples of cases that were not intended to be representative of the whole (such as those settlements approved in published opinions). In this article, by contrast, I attempt to collect every federal class action settlement from the years 2006 and 2007. As far as I am aware, this study is the first to attempt to collect a complete set of federal class action settlements for

⁴See, e.g., Samuel Issacharoff & Geoffrey Miller, *Will Aggregate Litigation Come to Europe?*, 62 Vand. L. Rev. 179 (2009).

⁵See, e.g., Emery Lee & Thomas E. Willing, *Impact of the Class Action Fairness Act on the Federal Courts: Preliminary Findings from Phase Two’s Pre-CAFA Sample of Diversity Class Actions 11* (Federal Judicial Center 2008); Tom Baker & Sean J. Griffith, *How the Merits Matter: D&O Insurance and Securities Settlements*, 157 U. Pa. L. Rev. 755 (2009).

⁶Empirical scholars have begun to study state court class actions in certain subject areas and in certain states. See, e.g., Robert B. Thompson & Randall S. Thomas, *The Public and Private Faces of Derivative Suits*, 57 Vand. L. Rev. 1747 (2004); Robert B. Thompson & Randall S. Thomas, *The New Look of Shareholder Litigation: Acquisition-Oriented Class Actions*, 57 Vand. L. Rev. 133 (2004); *Findings of the Study of California Class Action Litigation* (Administrative Office of the Courts) (First Interim Report, 2009).

⁷See Deborah R. Hensler et al., *Class Action Dilemmas: Pursuing Public Goals for Private Gain* 56 (2000).

any given year.⁸ As such, this article allows us to see for the first time a complete picture of the cases that are settled in federal court. This includes aggregate annual statistics, such as how many class actions are settled every year, how much money is approved every year in these settlements, and how much of that money class action lawyers reap every year. It also includes how these settlements are distributed geographically as well as by litigation area, what sort of relief was provided in the settlements, how long the class actions took to reach settlement, and an analysis of what factors were associated with the fees awarded to class counsel by district court judges.

Second, because this article analyzes settlements that were approved in both published and unpublished opinions, it allows us to assess how well the few prior studies that looked beyond securities cases but relied only on published opinions capture the complete picture of class action settlements. To the extent these prior studies adequately capture the complete picture, it may be less imperative for courts, policymakers, and empirical scholars to spend the considerable resources needed to collect unpublished opinions in order to make sound decisions about how to design our class action system.

Third, this article studies factors that may influence district court judges when they award fees to class counsel that have not been studied before. For example, in light of the discretion district court judges have been delegated over fees under Rule 23, as well as the salience the issue of class action litigation has assumed in national politics, realist theories of judicial behavior would predict that Republican judges would award smaller fee percentages than Democratic judges. I study whether the political beliefs of district court judges are associated with the fees they award and, in doing so, contribute to the literature that attempts to assess the extent to which these beliefs influence the decisions of not just appellate judges, but trial judges as well. Moreover, the article contributes to the small but growing literature examining whether the ideological influences found in published judicial decisions persist when unpublished decisions are examined as well.

In Section II of this article, I briefly survey the existing empirical studies of class action settlements. In Section III, I describe the methodology I used to collect the 2006–2007 federal class action settlements and I report my findings regarding these settlements. District court judges approved 688 class action settlements over this two-year period, involving over \$33 billion. I report a number of descriptive statistics for these settlements, including the number of plaintiff versus defendant classes, the distribution of settlements by subject matter, the age of the case at settlement, the geographic distribution of settlements, the number of settlement classes, the distribution of relief across settlements, and various statistics on the amount of money involved in the settlements. It should be noted that despite the fact that the few prior studies that looked beyond securities settlements appeared to oversample larger settlements, much of the analysis set forth in this article is consistent with these prior studies. This suggests that scholars may not need to sample unpublished as well as published opinions in order to paint an adequate picture of class action settlements.

⁸Of course, I cannot be certain that I found every one of the class actions that settled in federal court over this period. Nonetheless, I am confident that if I did not find some, the number I did not find is small and would not contribute meaningfully to the data reported in this article.

In Section IV, I perform an analysis of the fees judges awarded to class action lawyers in the 2006–2007 settlements. All told, judges awarded nearly \$5 billion over this two-year period in fees and expenses to class action lawyers, or about 15 percent of the total amount of the settlements. Most federal judges chose to award fees by using the highly discretionary percentage-of-the-settlement method and, unsurprisingly, the fees awarded according to this method varied over a broad range, with a mean and median around 25 percent. Using regression analysis, I confirm prior studies and find that fee percentages are strongly and inversely associated with the size of the settlement. Further, I find that the age of the case is positively associated with fee percentages but that the percentages were not associated with whether the class action was certified as a settlement class. There also appeared to be some variation in fee percentages depending on the subject matter of the litigation and the geographic circuit in which the district court was located. Fee percentages in securities cases were lower than the percentages in some but not all other areas, and district courts in some circuits—the Ninth and the Second (in securities cases)—awarded lower fee percentages than courts in many other circuits. Finally, the regression analysis did not confirm the realist hypothesis: there was no association between fee percentage and the political beliefs of the judge in any regression.

II. PRIOR EMPIRICAL STUDIES OF CLASS ACTION SETTLEMENTS

There are many existing empirical studies of federal securities class action settlements.⁹ Studies of securities settlements have been plentiful because for-profit organizations maintain lists of all federal securities class action settlements for the benefit of institutional investors that are entitled to file claims in these settlements.¹⁰ Using these data, studies have shown that since 2005, for example, there have been roughly 100 securities class action settlements in federal court each year, and these settlements have involved between \$7 billion and \$17 billion per year.¹¹ Scholars have used these data to analyze many different aspects of these settlements, including the factors that are associated with the percentage of

⁹See, e.g., James D. Cox & Randall S. Thomas, Does the Plaintiff Matter? An Empirical Analysis of Lead Plaintiffs in Securities Class Actions, 106 Colum. L. Rev. 1587 (2006); James D. Cox, Randall S. Thomas & Lynn Bai, There are Plaintiffs and . . . there are Plaintiffs: An Empirical Analysis of Securities Class Action Settlements, 61 Vand. L. Rev. 355 (2008); Theodore Eisenberg, Geoffrey Miller & Michael A. Perino, A New Look at Judicial Impact: Attorneys' Fees in Securities Class Actions after *Goldberger v. Integrated Resources, Inc.*, 29 Wash. U.J.L. & Pol'y 5 (2009); Michael A. Perino, Markets and Monitors: The Impact of Competition and Experience on Attorneys' Fees in Securities Class Actions (St. John's Legal Studies, Research Paper No. 06-0034, 2006), available at <<http://ssrn.com/abstract=870577>> [hereinafter Perino, Markets and Monitors]; Michael A. Perino, The Milberg Weiss Prosecution: No Harm, No Foul? ¹⁰See, e.g., RiskMetrics Group, available at <<http://www.riskmetrics.com/scas>>.

¹¹See Cornerstone Research, Securities Class Action Settlements: 2007 Review and Analysis 1 (2008), available at <http://securities.stanford.edu/Settlements/REVIEW_1995-2007/Settlements_Through_12_2007.pdf>.

the settlements that courts have awarded to class action lawyers.¹² These studies have found that the mean and median fees awarded by district court judges are between 20 percent and 30 percent of the settlement amount.¹³ These studies have also found that a number of factors are associated with the percentage of the settlement awarded as fees, including (inversely) the size of the settlement, the age of the case, whether a public pension fund was the lead plaintiff, and whether certain law firms were class counsel.¹⁴ None of these studies has examined whether the political affiliation of the federal district court judge awarding the fees was associated with the size of awards.

There are no comparable organizations that maintain lists of nonsecurities class action settlements. As such, studies of class action settlements beyond the securities area are much rarer and, when they have been done, rely on samples of settlements that were not intended to be representative of the whole. The two largest studies of class action settlements not limited to securities class actions are a 2004 study by Ted Eisenberg and Geoff Miller,¹⁵ which was recently updated to include data through 2008,¹⁶ and a 2003 study by Class Action Reports.¹⁷ The Eisenberg-Miller studies collected data from class action settlements in both state and federal courts found from court opinions published in the Westlaw and Lexis databases and checked against lists maintained by the CCH Federal Securities and Trade Regulation Reporters. Through 2008, their studies have now identified 689 settlements over a 16-year period, or less than 45 settlements per year.¹⁸ Over this 16-year period, their studies found that the mean and median settlement amounts were, respectively, \$116 million and \$12.5 million (in 2008 dollars), and that the mean and median fees awarded by district courts were 23 percent and 24 percent of the settlement, respectively.¹⁹ Their studies also performed an analysis of fee percentages and fee awards. For the data through 2002, they found that the percentage of the settlement awarded as fees was associated with the size of the settlement (inversely), the age of the case, and whether the

¹⁹*Id.* at 258–59.

district court went out of its way to comment on the level of risk that class counsel had assumed in pursuing the case.²⁰ For the data through 2008, they regressed only fee awards and found that the awards were inversely associated with the size of the settlement, that state courts gave lower awards than federal courts, and that the level of risk was still associated with larger awards.²¹ Their studies have not examined whether the political affiliations of the federal district court judges awarding fees were associated with the size of the awards.

The Class Action Reports study collected data on 1,120 state and federal settlements over a 30-year period, or less than 40 settlements per year.²² Over the same 10-year period analyzed by the Eisenberg-Miller study, the Class Action Reports data found mean and median settlements of \$35.4 and \$7.6 million (in 2002 dollars), as well as mean and median fee percentages between 25 percent and 30 percent.²³ Professors Eisenberg and Miller performed an analysis of the fee awards in the Class Action Reports study and found the percentage of the settlement awarded as fees was likewise associated with the size of the settlement (inversely) and the age of the case.²⁴

III. FEDERAL CLASS ACTION SETTLEMENTS, 2006 AND 2007

As far as I am aware, there has never been an empirical study of all federal class action settlements in a particular year. In this article, I attempt to make such a study for two recent years: 2006 and 2007. To compile a list of all federal class settlements in 2006 and 2007, I started with one of the aforementioned lists of securities settlements, the one maintained by RiskMetrics, and I supplemented this list with settlements that could be found through three other sources: (1) broad searches of district court opinions in the Westlaw and Lexis databases,²⁵ (2) four reporters of class action settlements—*BNA Class Action Litigation Report*, *Mealey's Jury Verdicts and Settlements*, *Mealey's Litigation Report*, and the *Class Action World* website²⁶—and (3) a list from the Administrative Office of Courts of all district court cases

²⁰See Eisenberg & Miller, *supra* note 15, at 61–62.

²¹See Eisenberg & Miller II, *supra* note 16, at 278.

²²See Eisenberg & Miller, *supra* note 15, at 34.

²³*Id.* at 47, 51.

²⁴*Id.* at 61–62.

²⁵The searches consisted of the following terms: (“class action” & (settle! /s approv! /s (2006 2007))); (((counsel attorney) /s fee /s award!) & (settle! /s (2006 2007)) & “class action”); (“class action” /s settle! & da(aft 12/31/2005 & bef 1/1/2008)); (“class action” /s (fair reasonable adequate) & da(aft 12/31/2005 & bef 1/1/2008)).

²⁶See <<http://classactionworld.com/>>.

coded as class actions that terminated by settlement between 2005 and 2008.²⁷ I then removed any duplicate cases and examined the docket sheets and court orders of each of the remaining cases to determine whether the cases were in fact certified as class actions under either Rule 23, Rule 23.1, or Rule 23.2.²⁸ For each of the cases verified as such, I gathered the district court's order approving the settlement, the district court's order awarding attorney fees, and, in many cases, the settlement agreements and class counsel's motions for fees, from electronic databases (such as Westlaw or PACER) and, when necessary, from the clerk's offices of the various federal district courts. In this section, I report the characteristics of the settlements themselves; in the next section, I report the characteristics of the attorney fees awarded to class counsel by the district courts that approved the settlements.

A. Number of Settlements

I found 688 settlements approved by federal district courts during 2006 and 2007 using the methodology described above. This is almost the exact same number the Eisenberg-Miller study found over a 16-year period in both federal *and* state court. Indeed, the number of annual settlements identified in this study is *several times* the number of annual settlements that have been identified in any prior empirical study of class action settlements. Of the 688 settlements I found, 304 were approved in 2006 and 384 were approved in 2007.²⁹

B. Defendant Versus Plaintiff Classes

Although Rule 23 permits federal judges to certify either a class of plaintiffs or a class of defendants, it is widely assumed that it is extremely rare for courts to certify defendant classes.³⁰ My findings confirm this widely held assumption. Of the 688 class action settlements approved in 2006 and 2007, 685 involved plaintiff classes and only three involved

²⁷I examined the AO lists in the year before and after the two-year period under investigation because the termination date recorded by the AO was not necessarily the same date the district court approved the settlement.

²⁸See Fed. R. Civ. P. 23, 23.1, 23.2. I excluded from this analysis opt-in collective actions, such as those brought pursuant to the provisions of the Fair Labor Standards Act (see 29 U.S.C. § 216(b)), if such actions did not also include claims certified under the opt-out mechanism in Rule 23.

²⁹A settlement was assigned to a particular year if the district court judge's order approving the settlement was dated between January 1 and December 31 of that year. Cases involving multiple defendants sometimes settled over time because defendants would settle separately with the plaintiff class. All such partial settlements approved by the district court on the same date were treated as one settlement. Partial settlements approved by the district court on different dates were treated as different settlements.

³⁰See, e.g., Robert H. Klonoff, Edward K.M. Bilich & Suzette M. Malveaux, *Class Actions and Other Multi-Party Litigation: Cases and Materials* 1061 (2d ed. 2006).

defendant classes. All three of the defendant-class settlements were in employment benefits cases, where companies sued classes of current or former employees.³¹

C. Settlement Subject Areas

Although courts are free to certify Rule 23 classes in almost any subject area, it is widely assumed that securities settlements dominate the federal class action docket.³² At least in terms of the number of settlements, my findings reject this conventional wisdom. As Table 1 shows, although securities settlements comprised a large percentage of the 2006 and 2007 settlements, they did not comprise a majority of those settlements. As one would have

Table 1: The Number of Class Action Settlements Approved by Federal Judges in 2006 and 2007 in Each Subject Area

Subject Matter	Number of Settlements	
	2006	2007
Securities	122 (40%)	135 (35%)
Labor and employment	41 (14%)	53 (14%)
Consumer	40 (13%)	47 (12%)
Employee benefits	23 (8%)	38 (10%)
Civil rights	24 (8%)	37 (10%)
Debt collection	19 (6%)	23 (6%)
Antitrust	13 (4%)	17 (4%)
Commercial	4 (1%)	9 (2%)
Other	18 (6%)	25 (6%)
Total	304	384

NOTE: Securities: cases brought under federal and state securities laws. Labor and employment: workplace claims brought under either federal or state law, with the exception of ERISA cases. Consumer: cases brought under the Fair Credit Reporting Act as well as cases for consumer fraud and the like. Employee benefits: ERISA cases. Civil rights: cases brought under 42 U.S.C. § 1983 or cases brought under the Americans with Disabilities Act seeking nonworkplace accommodations. Debt collection: cases brought under the Fair Debt Collection Practices Act. Antitrust: cases brought under federal or state antitrust laws. Commercial: cases between businesses, excluding antitrust cases. Other: includes, among other things, derivative actions against corporate managers and directors, environmental suits, insurance suits, Medicare and Medicaid suits, product liability suits, and mass tort suits.

³²See, e.g., John C. Coffee, Jr., *Reforming the Security Class Action: An Essay on Deterrence and its Implementation*, 106 Colum. L. Rev. 1534, 1539–40 (2006) (describing securities class actions as “the 800-pound gorilla that dominates and overshadows other forms of class actions”).

expected in light of Supreme Court precedent over the last two decades,³³ there were almost no mass tort class actions (included in the “Other” category) settled over the two-year period.

Although the Eisenberg-Miller study through 2008 is not directly comparable on the distribution of settlements across litigation subject areas—because its state and federal court data cannot be separated (more than 10 percent of the settlements were from state court³⁴) and because it excludes settlements in fee-shifting cases—their study through 2008 is the best existing point of comparison. Interestingly, despite the fact that state courts were included in their data, their study through 2008 found about the same percentage of securities cases (39 percent) as my 2006–2007 data set shows.³⁵ However, their study found many more consumer (18 percent) and antitrust (10 percent) cases, while finding many fewer labor and employment (8 percent), employee benefits (6 percent), and civil rights (3 percent) cases.³⁶ This is not unexpected given their reliance on published opinions and their exclusion of fee-shifting cases.

D. Settlement Classes

The Federal Rules of Civil Procedure permit parties to seek certification of a suit as a class action for settlement purposes only.³⁷ When the district court certifies a class in such circumstances, the court need not consider whether it would be manageable to try the litigation as a class.³⁸ So-called settlement classes have always been more controversial than classes certified for litigation because they raise the prospect that, at least where there are competing class actions filed against the same defendant, the defendant could play class counsel off one another to find the one willing to settle the case for the least amount of money.³⁹ Prior to the Supreme Court’s 1997 opinion in *Amchem Products, Inc. v. Windsor*,⁴⁰ it was uncertain whether the Federal Rules even permitted settlement classes. It may therefore be a bit surprising to learn that 68 percent of the federal settlements in 2006 and 2007 were settlement classes. This percentage is higher than the percentage found in the Eisenberg-Miller studies, which found that only 57 percent of class action settlements in

⁴⁰521 U.S. 591 (1997).

state and federal court between 2003 and 2008 were settlement classes.⁴¹ It should be noted that the distribution of litigation subject areas among the settlement classes in my 2006–2007 federal data set did not differ much from the distribution among nonsettlement classes, with two exceptions. One exception was consumer cases, which were nearly three times as prevalent among settlement classes (15.9 percent) as among nonsettlement classes (5.9 percent); the other was civil rights cases, which were four times as prevalent among nonsettlement classes (18.0 percent) as among settlements classes (4.5 percent). In light of the skepticism with which the courts had long treated settlement classes, one might have suspected that courts would award lower fee percentages in such settlements. Nonetheless, as I report in Section III, whether a case was certified as a settlement class was not associated with the fee percentages awarded by federal district court judges.

E. The Age at Settlement

One interesting question is how long class actions were litigated before they reached settlement. Unsurprisingly, cases reached settlement over a wide range of ages.⁴² As shown in Table 2, the average time to settlement was a bit more than three years (1,196 days) and the median time was a bit under three years (1,068 days). The average and median ages here are similar to those found in the Eisenberg-Miller study through 2002, which found averages of 3.35 years in fee-shifting cases and 2.86 years in non-fee-shifting cases, and

Table 2: The Number of Days, 2006–2007, Federal Class Action Cases Took to Reach Settlement in Each Subject Area

Subject Matter	Average	Median	Minimum	Maximum
Securities	1,438	1,327	392	3,802
Labor and employment	928	786	105	2,497
Consumer	963	720	127	4,961
Employee benefits	1,162	1,161	164	3,157
Civil rights	1,373	1,360	181	3,354
Debt collection	738	673	223	1,973
Antitrust	1,140	1,167	237	2,480
Commercial	1,267	760	163	5,443
Other	1,065	962	185	3,620
All	1,196	1,068	105	5,443

SOURCE: PACER.

⁴¹See Eisenberg & Miller II, *supra* note 16, at 266.

⁴²The age of the case was calculated by subtracting the date the relevant complaint was filed from the date the settlement was approved by the district court judge. The dates were taken from PACER. For consolidated cases, I used the date of the earliest complaint. If the case had been transferred, consolidated, or removed, the date the complaint was filed was not always available from PACER. In such cases, I used the date the case was transferred, consolidated, or removed as the start date.

medians of 4.01 years in fee-shifting cases and 3.0 years in non-fee-shifting cases.⁴³ Their study through 2008 did not report case ages.

The shortest time to settlement was 105 days in a labor and employment case.⁴⁴ The longest time to settlement was nearly 15 years (5,443 days) in a commercial case.⁴⁵ The average and median time to settlement varied significantly by litigation subject matter, with securities cases generally taking the longest time and debt collection cases taking the shortest time. Labor and employment cases and consumer cases also settled relatively early.

F. The Location of Settlements

The 2006–2007 federal class action settlements were not distributed across the country in the same way federal civil litigation is in general. As Figure 1 shows, some of the geographic circuits attracted much more class action attention than we would expect based on their docket size, and others attracted much less. In particular, district courts in the First, Second, Seventh, and Ninth Circuits approved a much larger share of class action settlements than the share of all civil litigation they resolved, with the First, Second, and Seventh Circuits approving nearly double the share and the Ninth Circuit approving one-and-one-half times the share. By contrast, the shares of class action settlements approved by district courts in the Fifth and Eighth Circuits were less than one-half of their share of all civil litigation, with the Third, Fourth, and Eleventh Circuits also exhibiting significant underrepresentation.

With respect to a comparison with the Eisenberg-Miller studies, their federal court data through 2008 can be separated from their state court data on the question of the geographic distribution of settlements, and there are some significant differences between their federal data and the numbers reflected in Figure 1. Their study reported considerably higher proportions of settlements than I found from the Second (23.8 percent), Third (19.7 percent), Eighth (4.8 percent), and D.C. (3.3 percent) Circuits, and considerably lower proportions from the Fourth (1.3 percent), Seventh (6.8 percent), and Ninth (16.6 percent) Circuits.⁴⁶

Figure 2 separates the class action settlement data in Figure 1 into securities and nonsecurities cases. Figure 2 suggests that the overrepresentation of settlements in the First and Second Circuits is largely attributable to securities cases, whereas the overrepresentation in the Seventh Circuit is attributable to nonsecurities cases, and the overrepresentation in the Ninth is attributable to both securities and nonsecurities cases.

It is interesting to ask why some circuits received more class action attention than others. One hypothesis is that class actions are filed in circuits where class action lawyers

⁴³See Eisenberg & Miller, *supra* note 15, at 59–60.

⁴⁵See *Allapattah Servs. Inc. v. Exxon Corp.*, No. 91-0986 (S.D. Fla. Apr. 7, 2006).

⁴⁶See Eisenberg & Miller II, *supra* note 16, at 260.

Figure 1: The percentage of 2006–2007 district court civil terminations and class action settlements in each federal circuit.

SOURCES: PACER, Statistical Tables for the Federal Judiciary 2006 & 2007 (available at <<http://www.uscourts.gov/stats/index.html>>).

believe they can find favorable law or favorable judges. Federal class actions often involve class members spread across multiple states and, as such, class action lawyers may have a great deal of discretion over the district in which file suit.⁴⁷ One way law or judges may be favorable to class action attorneys is with regard to attorney fees. In Section III, I attempt to test whether district court judges in the circuits with the most over- and undersubscribed class action dockets award attorney fees that would attract or discourage filings there; I find no evidence that they do.

Another hypothesis is that class action suits are settled in jurisdictions where defendants are located. This might be the case because although class action lawyers may have discretion over where to file, venue restrictions might ultimately restrict cases to jurisdic-

⁴⁷See Samuel Issacharoff & Richard Nagareda, Class Settlements Under Attack, 156 U. Pa. L. Rev. 1649, 1662 (2008).

Figure 2: The percentage of 2006–2007 district court civil terminations and class action settlements in each federal circuit.

SOURCES: PACER, Statistical Tables for the Federal Judiciary 2006 & 2007 (available at <<http://www.uscourts.gov/stats/index.html>>).

tions in which defendants have their corporate headquarters or other operations.⁴⁸ This might explain why the Second Circuit, with the financial industry in New York, sees so many securities suits, and why other circuits with cities with a large corporate presence, such as the First (Boston), Seventh (Chicago), and Ninth (Los Angeles and San Francisco), see more settlements than one would expect based on the size of their civil dockets.

Another hypothesis might be that class action lawyers file cases wherever it is most convenient for them to litigate the cases—that is, in the cities in which their offices are located. This, too, might explain the Second Circuit’s overrepresentation in securities settlements, with prominent securities firms located in New York, as well as the

⁴⁸See 28 U.S.C. §§ 1391, 1404, 1406, 1407. See also *Foster v. Nationwide Mut. Ins. Co.*, No. 07-04928, 2007 U.S. Dist. LEXIS 95240 at *2–17 (N.D. Cal. Dec. 14, 2007) (transferring venue to jurisdiction where defendant’s corporate headquarters were located). One prior empirical study of securities class action settlements found that 85 percent of such cases are filed in the home circuit of the defendant corporation. See James D. Cox, Randall S. Thomas & Lynn Bai, Do Differences in Pleading Standards Cause Forum Shopping in Securities Class Actions?: Doctrinal and Empirical Analyses, 2009 Wis. L. Rev. 421, 429, 440, 450–51 (2009).

overrepresentation of other settlements in some of the circuits in which major metropolitan areas with prominent plaintiffs’ firms are found.

G. Type of Relief

Under Rule 23, district court judges can certify class actions for injunctive or declaratory relief, for money damages, or for a combination of the two.⁴⁹ In addition, settlements can provide money damages both in the form of cash as well as in the form of in-kind relief, such as coupons to purchase the defendant’s products.⁵⁰

As shown in Table 3, the vast majority of class actions settled in 2006 and 2007 provided cash relief to the class (89 percent), but a substantial number also provided in-kind relief (6 percent) or injunctive or declaratory relief (23 percent). As would be

Table 3: The Percentage of 2006 and 2007 Class Action Settlements Providing Each Type of Relief in Each Subject Area

<i>Subject Matter</i>	<i>Cash</i>	<i>In-Kind Relief</i>	<i>Injunctive or Declaratory Relief</i>
Securities (<i>n</i> = 257)	100%	0%	2%
Labor and employment (<i>n</i> = 94)	95%	6%	29%
Consumer (<i>n</i> = 87)	74%	30%	37%
Employee benefits (<i>n</i> = 61)	90%	0%	34%
Civil rights (<i>n</i> = 61)	49%	2%	75%
Debt collection (<i>n</i> = 42)	98%	0%	12%
Antitrust (<i>n</i> = 30)	97%	13%	7%
Commercial (<i>n</i> = 13)	92%	0%	62%
Other (<i>n</i> = 43)	77%	7%	33%
All (<i>n</i> = 688)	89%	6%	23%

NOTE: Cash: cash, securities, refunds, charitable contributions, contributions to employee benefit plans, forgiven debt, relinquishment of liens or claims, and liquidated repairs to property. In-kind relief: vouchers, coupons, gift cards, warranty extensions, merchandise, services, and extended insurance policies. Injunctive or declaratory relief: modification of terms of employee benefit plans, modification of compensation practices, changes in business practices, capital improvements, research, and unliquidated repairs to property.

SOURCES: Westlaw, PACER, district court clerks’ offices.

⁴⁹See Fed. R. Civ. P. 23(b).

⁵⁰These coupon settlements have become very controversial in recent years, and Congress discouraged them in the Class Action Fairness Act of 2005 by tying attorney fees to the value of coupons that were ultimately redeemed by class members as opposed to the value of coupons offered class members. See 28 U.S.C. § 1712.

expected in light of the focus on consumer cases in the debate over the anti-coupon provision in the Class Action Fairness Act of 2005,⁵¹ consumer cases had the greatest percentage of settlements providing for in-kind relief (30 percent). Civil rights cases had the greatest percentage of settlements providing for injunctive or declaratory relief (75 percent), though almost half the civil rights cases also provided some cash relief (49 percent). The securities settlements were quite distinctive from the settlements in other areas in their singular focus on cash relief: every single securities settlement provided cash to the class and almost none provided in-kind, injunctive, or declaratory relief. This is but one example of how the focus on securities settlements in the prior empirical scholarship can lead to a distorted picture of class action litigation.

H. Settlement Money

Although securities settlements did not comprise the majority of federal class action settlements in 2006 and 2007, they did comprise the majority of the money—indeed, the *vast majority* of the money—involved in class action settlements. In Table 4, I report the total amount of ascertainable value involved in the 2006 and 2007 settlements. This amount

Table 4: The Total Amount of Money Involved in Federal Class Action Settlements in 2006 and 2007

Subject Matter	Total Ascertainable Monetary Value in Settlements (and Percentage of Overall Annual Total)			
	2006 (n = 304)		2007 (n = 384)	
Securities	\$16,728	76%	\$8,038	73%
Labor and employment	\$266.5	1%	\$547.7	5%
Consumer	\$517.3	2%	\$732.8	7%
Employee benefits	\$443.8	2%	\$280.8	3%
Civil rights	\$265.4	1%	\$81.7	1%
Debt collection	\$8.9	<1%	\$5.7	<1%
Antitrust	\$1,079	5%	\$660.5	6%
Commercial	\$1,217	6%	\$124.0	1%
Other	\$1,568	7%	\$592.5	5%
Total	\$22,093	100%	\$11,063	100%

NOTE: Dollar amounts are in millions. Includes all determinate payments in cash or cash equivalents (such as marketable securities), including attorney fees and expenses, as well as any in-kind relief (such as coupons) or injunctive relief that was valued by the district court.

SOURCES: Westlaw, PACER, district court clerks’ offices.

⁵¹See, e.g., 151 Cong. Rec. H723 (2005) (statement of Rep. Sensenbrenner) (arguing that consumers are “seeing all of their gains go to attorneys and them just getting coupon settlements from the people who have allegedly done them wrong”).

includes all determinate⁵² payments in cash or cash equivalents (such as marketable securities), including attorney fees and expenses, as well as any in-kind relief (such as coupons) or injunctive relief that was valued by the district court.⁵³ I did not attempt to assign a value to any relief that was not valued by the district court (even if it may have been valued by class counsel). It should be noted that district courts did not often value in-kind or injunctive relief—they did so only 18 percent of the time—and very little of Table 4—only \$1.3 billion, or 4 percent—is based on these valuations. It should also be noted that the amounts in Table 4 reflect only what defendants *agreed to pay*; they do not reflect the amounts that defendants *actually paid* after the claims administration process concluded. Prior empirical research has found that, depending on how settlements are structured (e.g., whether they awarded a fixed amount of money to each class member who eventually files a valid claim or a pro rata amount of a fixed settlement to each class member), defendants can end up paying much less than they agreed.⁵⁴

Table 4 shows that in both years, around three-quarters of all the money involved in federal class action settlements came from securities cases. Thus, in this sense, the conventional wisdom about the dominance of securities cases in class action litigation is correct. Figure 3 is a graphical representation of the contribution each litigation area made to the total number and total amount of money involved in the 2006–2007 settlements.

Table 4 also shows that, in total, over \$33 billion was approved in the 2006–2007 settlements. Over \$22 billion was approved in 2006 and over \$11 billion in 2007. It should be emphasized again that the totals in Table 4 understate the amount of money defendants agreed to pay in class action settlements in 2006 and 2007 because they exclude the unascertainable value of those settlements. This understatement disproportionately affects litigation areas, such as civil rights, where much of the relief is injunctive because, as I noted, very little of such relief was valued by district courts. Nonetheless, these numbers are, as far as I am aware, the first attempt to calculate how much money is involved in federal class action settlements in a given year.

The significant discrepancy between the two years is largely attributable to the 2006 securities settlement related to the collapse of Enron, which totaled \$6.6 billion, as well as to the fact that seven of the eight 2006–2007 settlements for more than \$1 billion were approved in 2006.⁵⁵ Indeed, it is worth noting that the eight settlements for more than \$1

⁵²For example, I excluded awards of a fixed amount of money to each class member who eventually filed a valid claim (as opposed to settlements that awarded a pro rata amount of a fixed settlement to each class member) if the total amount of money set aside to pay the claims was not set forth in the settlement documents.

⁵³In some cases, the district court valued the relief in the settlement over a range. In these cases, I used the middle point in the range.

⁵⁴See Hensler et al., *supra* note 7, at 427–30.

⁵⁵See *In re Enron Corp. Secs. Litig.*, MDL 1446 (S.D. Tex. May 24, 2006) (\$6,600,000,000); *In re Tyco Int'l Ltd. Multidistrict Litig.*, MDL 02-1335 (D.N.H. Secs. & ERISA Litig.*, 03-1539 (D. Md. Jun. 16, 2006)

Figure 3: The percentage of 2006–2007 federal class action settlements and settlement money from each subject area.

SOURCES: Westlaw, PACER, district court clerks’ offices.

billion accounted for almost \$18 billion of the \$33 billion that changed hands over the two-year period. That is, a mere 1 percent of the settlements comprised over 50 percent of the value involved in federal class action settlements in 2006 and 2007. To give some sense of the distribution of settlement size in the 2006–2007 data set, Table 5 sets forth the number of settlements with an ascertainable value beyond fee, expense, and class-representative incentive awards (605 out of the 688 settlements). Nearly two-thirds of all settlements fell below \$10 million.

Given the disproportionate influence exerted by securities settlements on the total amount of money involved in class actions, it is unsurprising that the average securities settlement involved more money than the average settlement in most of the other subject areas. These numbers are provided in Table 6, which includes, again, only the settlements

(\$1,100,000,000); Allapattah Servs. Inc. v. Exxon Corp., No. 91-0986 (S.D. Fla. Apr. 7, 2006) (\$1,075,000,000); In re Nortel Networks Corp. Secs. Litig. (Nortel II), No. 05-1659 (S.D.N.Y. Dec. 26, 2006) (\$1,074,270,000).

Table 5: The Distribution by Size of 2006–2007 Federal Class Action Settlements with Ascertainable Value

<i>Settlement Size (in Millions)</i>	<i>Number of Settlements</i>
[\$0 to \$1]	131 (21.7%)
(\$1 to \$10]	261 (43.1%)
(\$10 to \$50]	139 (23.0%)
(\$50 to \$100]	33 (5.45%)
(\$100 to \$500]	31 (5.12%)
(\$500 to \$6,600]	10 (1.65%)
Total	605

NOTE: Includes only settlements with ascertainable value beyond merely fee, expense, and class-representative incentive awards.
SOURCES: Westlaw, PACER, district court clerks’ offices.

Table 6: The Average and Median Settlement Amounts in the 2006–2007 Federal Class Action Settlements with Ascertainable Value to the Class

<i>Subject Matter</i>	<i>Average</i>	<i>Median</i>
Securities (<i>n</i> = 257)	\$96.4	\$8.0
Labor and employment (<i>n</i> = 88)	\$9.2	\$1.8
Consumer (<i>n</i> = 65)	\$18.8	\$2.9
Employee benefits (<i>n</i> = 52)	\$13.9	\$5.3
Civil rights (<i>n</i> = 34)	\$9.7	\$2.5
Debt collection (<i>n</i> = 40)	\$0.37	\$0.088
Antitrust (<i>n</i> = 29)	\$60.0	\$22.0
Commercial (<i>n</i> = 12)	\$111.7	\$7.1
Other (<i>n</i> = 28)	\$76.6	\$6.2
All (<i>N</i> = 605)	\$54.7	\$5.1

NOTE: Dollar amounts are in millions. Includes only settlements with ascertainable value beyond merely fee, expense, and class-representative incentive awards.
SOURCES: Westlaw, PACER, district court clerks’ offices.

with an ascertainable value beyond fee, expense, and class-representative incentive awards. The average settlement over the entire two-year period for all types of cases was almost \$55 million, but the median was only \$5.1 million. (With the \$6.6 billion Enron settlement excluded, the average settlement for all ascertainable cases dropped to \$43.8 million and, for securities cases, dropped to \$71.0 million.) The average settlements varied widely by litigation area, with securities and commercial settlements at the high end of around \$100

million, but the median settlements for nearly every area were bunched around a few million dollars. It should be noted that the high average for commercial cases is largely due to one settlement above \$1 billion;⁵⁶ when that settlement is removed, the average for commercial cases was only \$24.2 million.

Table 6 permits comparison with the two prior empirical studies of class action settlements that sought to include nonsecurities as well as securities cases in their purview. The Eisenberg-Miller study through 2002, which included both common-fund and fee-shifting cases, found that the mean class action settlement was \$112 million and the median was \$12.9 million, both in 2006 dollars,⁵⁷ more than double the average and median I found for all settlements in 2006 and 2007. The Eisenberg-Miller update through 2008 included only common-fund cases and found mean and median settlements in federal court of \$115 million and \$11.7 million (both again in 2006 dollars),⁵⁸ respectively; this is still more than double the average and median I found. This suggests that the methodology used by the Eisenberg-Miller studies—looking at district court opinions that were published in Westlaw or Lexis—oversampled larger class actions (because opinions approving larger class actions are, presumably, more likely to be published than opinions approving smaller ones). It is also possible that the exclusion of fee-shifting cases from their data through 2008 contributed to this skew, although, given that their data through 2002 included fee-shifting cases and found an almost identical mean and median as their data through 2008, the primary explanation for the much larger mean and median in their study through 2008 is probably their reliance on published opinions. Over the same years examined by Professors Eisenberg and Miller, the Class Action Reports study found a smaller average settlement than I did (\$39.5 million in 2006 dollars), but a larger median (\$8.48 million in 2006 dollars). It is possible that the Class Action Reports methodology also oversampled larger class actions, explaining its larger median, but that there are more “mega” class actions today than there were before 2003, explaining its smaller mean.⁵⁹

It is interesting to ask how significant the \$16 billion that was involved annually in these 350 or so federal class action settlements is in the grand scheme of U.S. litigation. Unfortunately, we do not know how much money is transferred every year in U.S. litigation. The only studies of which I am aware that attempt even a partial answer to this question are the estimates of how much money is transferred in the U.S. “tort” system every year by a financial services consulting firm, Tillinghast-Towers Perrin.⁶⁰ These studies are not directly

⁵⁶See *Allapattah Servs. Inc. v. Exxon Corp.*, No. 91-0986 (S.D. Fla. Apr. 7, 2006) (approving \$1,075,000,000 settlement).

⁵⁷See Eisenberg & Miller, *supra* note 15, at 47.

⁵⁸See Eisenberg & Miller II, *supra* note 16, at 262.

⁵⁹There were eight class action settlements during 2006 and 2007 of more than \$1 billion. See note 55 *supra*.

⁶⁰Some commentators have been critical of Tillinghast’s reports, typically on the ground that the reports overestimate the cost of the tort system. See M. Martin Boyer, *Three Insights from the Canadian D&O Insurance Market: Inertia, Information and Insiders*, 14 *Conn. Ins. L.J.* 75, 84 (2007); John Fabian Witt, *Form and Substance in the Law of*

comparable to the class action settlement numbers because, again, the number of tort class action settlements in 2006 and 2007 was very small. Nonetheless, as the tort system no doubt constitutes a large percentage of the money transferred in all litigation, these studies provide something of a point of reference to assess the significance of class action settlements. In 2006 and 2007, Tillinghast-Towers Perrin estimated that the U.S. tort system transferred \$160 billion and \$164 billion, respectively, to claimants and their lawyers.⁶¹ The total amount of money involved in the 2006 and 2007 federal class action settlements reported in Table 4 was, therefore, roughly 10 percent of the Tillinghast-Towers Perrin estimate. This suggests that in merely 350 cases every year, federal class action settlements involve the same amount of wealth as 10 percent of the entire U.S. tort system. It would seem that this is a significant amount of money for so few cases.

IV. ATTORNEY FEES IN FEDERAL CLASS ACTION SETTLEMENTS, 2006 AND 2007

A. Total Amount of Fees and Expenses

As I demonstrated in Section III, federal class action settlements involved a great deal of money in 2006 and 2007, some \$16 billion a year. A perennial concern with class action litigation is whether class action lawyers are reaping an outsized portion of this money.⁶² The 2006–2007 federal class action data suggest that these concerns may be exaggerated. Although class counsel were awarded some \$5 billion in fees and expenses over this period, as shown in Table 7, only 13 percent of the settlement amount in 2006 and 20 percent of the amount in 2007 went to fee and expense awards.⁶³ The 2006 percentage is lower than the 2007 percentage in large part because the class action lawyers in the Enron securities settlement received less than 10 percent of the \$6.6 billion corpus. In any event, the percentages in both 2006 and 2007 are far lower than the portions of settlements that contingency-fee lawyers receive in individual litigation, which are usually at least 33 percent.⁶⁴ Lawyers received less than 33 percent of settlements in fees and expenses in virtually every subject area in both years.

Counterinsurgency Damages, 41 *Loy. L.A.L. Rev.* 1455, 1475 n.135 (2008). If these criticisms are valid, then class action settlements would appear even more significant as compared to the tort system.

⁶¹See Tillinghast-Towers Perrin, *U.S. Tort Costs: 2008 Update 5* (2008). The report calculates \$252 billion in total tort “costs” in 2007 and \$246.9 billion in 2006, *id.*, but only 65 percent of those costs represent payments made to claimants and their lawyers (the remainder represents insurance administration costs and legal costs to defendants). See Tillinghast-Towers Perrin, *U.S. Tort Costs: 2003 Update 17* (2003).

⁶²See, e.g., Brian T. Fitzpatrick, *Do Class Action Lawyers Make Too Little?* 158 *U. Pa. L. Rev.* 2043, 2043–44 (2010).

⁶³In some of the partial settlements, see note 29 *supra*, the district court awarded expenses for all the settlements at once and it was unclear what portion of the expenses was attributable to which settlement. In these instances, I assigned each settlement a pro rata portion of expenses. To the extent possible, all the fee and expense numbers in this article exclude any interest known to be awarded by the courts.

⁶⁴See, e.g., Herbert M. Kritzer, *The Wages of Risk: The Returns of Contingency Fee Legal Practice*, 47 *DePaul L. Rev.* 267, 284–86 (1998) (reporting results of a survey of Wisconsin lawyers).

Table 7: The Total Amount of Fees and Expenses Awarded to Class Action Lawyers in Federal Class Action Settlements in 2006 and 2007

Subject Matter	Total Fees and Expenses Awarded in Settlements (and as Percentage of Total Settlement Amounts) in Each Subject Area	
	2006 (n = 292)	2007 (n = 363)
Securities	\$1,899 (11%)	\$1,467 (20%)
Labor and employment	\$75.1 (28%)	\$144.5 (26%)
Consumer	\$126.4 (24%)	\$65.3 (9%)
Employee benefits	\$57.1 (13%)	\$71.9 (26%)
Civil rights	\$31.0 (12%)	\$32.2 (39%)
Debt collection	\$2.5 (28%)	\$1.1 (19%)
Antitrust	\$274.6 (26%)	\$157.3 (24%)
Commercial	\$347.3 (29%)	\$18.2 (15%)
Other	\$119.3 (8%)	\$103.3 (17%)
Total	\$2,932 (13%)	\$2,063 (20%)

NOTE: Dollar amounts are in millions. Excludes settlements in which fees were not (or at least not yet) sought (22 settlements), settlements in which fees have not yet been awarded (two settlements), and settlements in which fees could not be ascertained due to indefinite award amounts, missing documents, or nonpublic side agreements (nine settlements).

SOURCES: Westlaw, PACER, district court clerks’ offices.

It should be noted that, in some respects, the percentages in Table 7 overstate the portion of settlements that were awarded to class action attorneys because, again, many of these settlements involved indefinite cash relief or noncash relief that could not be valued.⁶⁵ If the value of all this relief could have been included, then the percentages in Table 7 would have been even lower. On the other hand, as noted above, not all the money defendants agree to pay in class action settlements is ultimately collected by the class.⁶⁶ To the extent leftover money is returned to the defendant, the percentages in Table 7 understate the portion class action lawyers received relative to their clients.

B. Method of Awarding Fees

District court judges have a great deal of discretion in how they set fee awards in class action cases. Under Rule 23, federal judges are told only that the fees they award to class counsel

⁶⁵Indeed, the large year-to-year variation in the percentages in labor, consumer, and employee benefits cases arose because district courts made particularly large valuations of the equitable relief in a few settlements and used the lodestar method to calculate the fees in these settlements (and thereby did not consider their large valuations in calculating the fees).

⁶⁶See Hensler et al., *supra* note 7, at 427–30.

must be “reasonable.”⁶⁷ Courts often exercise this discretion by choosing between two approaches: the lodestar approach or the percentage-of-the-settlement approach.⁶⁸ The lodestar approach works much the way it does in individual litigation: the court calculates the fee based on the number of hours class counsel actually worked on the case multiplied by a reasonable hourly rate and a discretionary multiplier.⁶⁹ The percentage-of-the-settlement approach bases the fee on the size of the settlement rather than on the hours class counsel actually worked: the district court picks a percentage of the settlement it thinks is reasonable based on a number of factors, one of which is often the fee lodestar (sometimes referred to as a “lodestar cross-check”).⁷⁰ My 2006–2007 data set shows that the percentage-of-the-settlement approach has become much more common than the lodestar approach. In 69 percent of the settlements reported in Table 7, district court judges employed the percentage-of-the-settlement method with or without the lodestar cross-check. They employed the lodestar method in only 12 percent of settlements. In the other 20 percent of settlements, the court did not state the method it used or it used another method altogether.⁷¹ The pure lodestar method was used most often in consumer (29 percent) and debt collection (45 percent) cases. These numbers are fairly consistent with the Eisenberg-Miller data from 2003 to 2008. They found that the lodestar method was used in only 9.6 percent of settlements.⁷² Their number is no doubt lower than the 12 percent number found in my 2006–2007 data set because they excluded fee-shifting cases from their study.

C. Variation in Fees Awarded

Not only do district courts often have discretion to choose between the lodestar method and the percentage-of-the-settlement method, but each of these methods leaves district courts with a great deal of discretion in how the method is ultimately applied. The courts

⁶⁷Fed. R. Civ. P. 23(h).

⁶⁸The discretion to pick between these methods is most pronounced in settlements where the underlying claim was not found in a statute that would shift attorney fees to the defendant. See, e.g., *In re Thirteen Appeals Arising out of San Juan DuPont Plaza Hotel Fire Litig.*, 56 F.3d 295, 307 (1st Cir. 1995) (permitting either percentage or lodestar method in common-fund cases); *Goldberger v. Integrated Res. Inc.*, 209 F.3d 43, 50 (2d Cir. 2000) (same); *Rawlings v. Prudential-Bache Props., Inc.*, 9 F.3d 513, 516 (6th Cir. 1993) (same). By contrast, courts typically used the lodestar approach in settlements arising from fee-shifting cases.

⁶⁹See Eisenberg & Miller, *supra* note 15, at 31.

⁷⁰*Id.* at 31–32.

⁷¹These numbers are based on the fee method described in the district court’s order awarding fees, unless the order was silent, in which case the method, if any, described in class counsel’s motion for fees (if it could be obtained) was used. If the court explicitly justified the fee award by reference to its percentage of the settlement, I counted it as the percentage method. If the court explicitly justified the award by reference to a lodestar calculation, I counted it as the lodestar method. If the court explicitly justified the award by reference to both, I counted it as the percentage method with a lodestar cross-check. If the court calculated neither a percentage nor the fee lodestar in its order, then I counted it as an “other” method.

⁷²See Eisenberg & Miller II, *supra* note 16, at 267.

that use the percentage-of-the-settlement method usually rely on a multifactor test⁷³ and, like most multifactor tests, it can plausibly yield many results. It is true that in many of these cases, judges examine the fee percentages that other courts have awarded to guide their discretion.⁷⁴ In addition, the Ninth Circuit has adopted a presumption that 25 percent is the proper fee award percentage in class action cases.⁷⁵ Moreover, in securities cases, some courts presume that the proper fee award percentage is the one class counsel agreed to when it was hired by the large shareholder that is now usually selected as the lead plaintiff in such cases.⁷⁶ Nonetheless, presumptions, of course, can be overcome and, as one court has put it, “[t]here is no hard and fast rule mandating a certain percentage . . . which may reasonably be awarded as a fee because the amount of any fee must be determined upon the facts of each case.”⁷⁷ The court added: “[i]ndividualization in the exercise of a discretionary power [for fee awards] will alone retain equity as a living system and save it from sterility.”⁷⁸ It is therefore not surprising that district courts awarded fees over a broad range when they used the percentage-of-the-settlement method. Figure 4 is a graph of the distribution of fee awards as a percentage of the settlement in the 444 cases where district courts used the percentage method with or without a lodestar cross-check and the fee percentages were ascertainable. These fee awards are exclusive of awards for expenses whenever the awards could be separated by examining either the district court’s order or counsel’s motion for fees and expenses (which was 96 percent of the time). The awards ranged from 3 percent of the settlement to 47 percent of the settlement. The average award was 25.4 percent and the median was 25 percent. Most fee awards were between 25 percent and 35 percent, with almost no awards more than 35 percent. The Eisenberg-Miller study through 2008 found a slightly lower mean (24 percent) but the same median (25 percent) among its federal court settlements.⁷⁹

It should be noted that in 218 of these 444 settlements (49 percent), district courts said they considered the lodestar calculation as a factor in assessing the reasonableness of the fee percentages awarded. In 204 of these settlements, the lodestar multiplier resulting

⁷³The Eleventh Circuit, for example, has identified a nonexclusive list of 15 factors that district courts might consider. See *Camden I Condo. Ass’n, Inc. v. Dunkle*, 946 F.2d 768, 772 n.3, 775 (11th Cir. 1991). See also *In re Tyco Int’l, Ltd. Multidistrict Litig.*, 535 F. Supp. 2d 249, 265 (D.N.H. 2007) (five factors); *Goldberger v. Integrated Res. Inc.*, 209 F.3d 43, 50 (2d Cir. 2000) (six factors); *Gunter v. Ridgewood Energy Corp.*, 223 F.3d 190, 195 n.1 (3d Cir. 2000) (seven factors); *In re Royal Ahold N.V. Sec. & ERISA Litig.*, 461 F. Supp. 2d 383, 385 (D. Md. 2006) (13 factors); *Brown v. Phillips Petroleum Co.*, 838 F.2d 451, 454 (10th Cir. 1988) (12 factors); *In re Baan Co. Sec. Litig.*, 288 F. Supp. 2d 14, 17 (D.D.C. 2003) (seven factors).

SOURCES: Westlaw, PACER, district court clerks’ offices.

from the fee award could be ascertained. The lodestar multiplier in these cases ranged from 0.07 to 10.3, with a mean of 1.65 and a median of 1.34. Although there is always the possibility that class counsel are optimistic with their timesheets when they submit them for lodestar consideration, these lodestar numbers—only one multiplier above 6.0, with the bulk of the range not much above 1.0—strike me as fairly parsimonious for the risk that goes into any piece of litigation and cast doubt on the notion that the percentage-of-the-settlement method results in windfalls to class counsel.⁸⁰

Table 8 shows the mean and median fee percentages awarded in each litigation subject area. The fee percentages did not appear to vary greatly across litigation subject areas, with most mean and median awards between 25 percent and 30 percent. As I report later in this section, however, after controlling for other variables, there were statistically significant differences in the fee percentages awarded in some subject areas compared to others. The mean and median percentages for securities cases were 24.7 percent and 25.0 percent, respectively; for all nonsecurities cases, the mean and median were 26.1 percent and 26.0 percent, respectively. The Eisenberg-Miller study through 2008 found mean awards ranging from 21–27 percent and medians from 19–25 percent,⁸¹ a bit lower than the ranges in my

⁸⁰It should be emphasized, of course, that these 204 settlements may not be representative of the settlements where the percentage-of-the-settlement method was used without the lodestar cross-check.

⁸¹See Eisenberg & Miller II, *supra* note 16, at 262.

Table 8: Fee Awards in 2006–2007 Federal Class Action Settlements Using the Percentage-of-the-Settlement Method With or Without Lodestar Cross-Check

<i>Subject Matter</i>	<i>Percentage of Settlement Awarded as Fees</i>	
	<i>Mean</i>	<i>Median</i>
Securities (<i>n</i> = 233)	24.7	25.0
Labor and employment (<i>n</i> = 61)	28.0	29.0
Consumer (<i>n</i> = 39)	23.5	24.6
Employee benefits (<i>n</i> = 37)	26.0	28.0
Civil rights (<i>n</i> = 20)	29.0	30.3
Debt collection (<i>n</i> = 5)	24.2	25.0
Antitrust (<i>n</i> = 23)	25.4	25.0
Commercial (<i>n</i> = 7)	23.3	25.0
Other (<i>n</i> = 19)	24.9	26.0
All (<i>N</i> = 444)	25.7	25.0

2006–2007 data set, which again, may be because they oversampled larger settlements (as I show below, district courts awarded smaller fee percentages in larger cases).

In light of the fact that, as I noted above, the distribution of class action settlements among the geographic circuits does not track their civil litigation dockets generally, it is interesting to ask whether one reason for the pattern in class action cases is that circuits oversubscribed with class actions award higher fee percentages. Although this question will be taken up with more sophistication in the regression analysis below, it is worth describing here the mean and median fee percentages in each of the circuits. Those data are presented in Table 9. Contrary to the hypothesis set forth in Section III, two of the circuits most oversubscribed with class actions, the Second and the Ninth, were the only circuits in which the mean fee awards were *under* 25 percent. As I explain below, these differences are statistically significant and remain so after controlling for other variables.

The lodestar method likewise permits district courts to exercise a great deal of leeway through the application of the discretionary multiplier. Figure 5 shows the distribution of lodestar multipliers in the 71 settlements in which district courts used the lodestar method and the multiplier could be ascertained. The average multiplier was 0.98 and the median was 0.92, which suggest that courts were not terribly prone to exercise their discretion to deviate from the amount of money encompassed in the lodestar calculation. These 71

Table 9: Fee Awards in 2006–2007 Federal Class Action Settlements Using the Percentage-of-the-Settlement Method With or Without Lodestar Cross-Check

<i>Circuit</i>	<i>Percentage of Settlement Awarded as Fees</i>	
	<i>Mean</i>	<i>Median</i>
First (<i>n</i> = 27)	27.0	25.0
Second (<i>n</i> = 72)	23.8	24.5
Third (<i>n</i> = 50)	25.4	29.3
Fourth (<i>n</i> = 19)	25.2	28.0
Fifth (<i>n</i> = 27)	26.4	29.0
Sixth (<i>n</i> = 25)	26.1	28.0
Seventh (<i>n</i> = 39)	27.4	29.0
Eighth (<i>n</i> = 15)	26.1	30.0
Ninth (<i>n</i> = 111)	23.9	25.0
Tenth (<i>n</i> = 18)	25.3	25.5
Eleventh (<i>n</i> = 35)	28.1	30.0
DC (<i>n</i> = 6)	26.9	26.0

SOURCES: Westlaw, PACER, district court clerks’ offices.

settlements were heavily concentrated within the consumer (median multiplier 1.13) and debt collection (0.66) subject areas. If cases in which district courts used the percentage-of-the-settlement method with a lodestar cross-check are combined with the lodestar cases, the average and median multipliers (in the 263 cases where the multipliers were ascertainable) were 1.45 and 1.19, respectively. Again—putting to one side the possibility that class counsel are optimistic with their timesheets—these multipliers appear fairly modest in light of the risk involved in any piece of litigation.

D. Factors Influencing Percentage Awards

Whether district courts are exercising their discretion over fee awards wisely is an important public policy question given the amount of money at stake in class action settlements. As shown above, district court judges awarded class action lawyers nearly \$5 billion in fees and expenses in 2006–2007. Based on the comparison to the tort system set forth in Section III, it is not difficult to surmise that in the 350 or so settlements every year, district court judges

Figure 5: The distribution of lodestar multipliers in 2006–2007 federal class action fee awards using the lodestar method.

SOURCES: Westlaw, PACER, district court clerks’ offices.

are awarding a significant portion of all the annual compensation received by contingency-fee lawyers in the United States. Moreover, contingency fees are arguably the engine that drives much of the noncriminal regulation in the United States; unlike many other nations, we regulate largely through the ex post, decentralized device of litigation.⁸² To the extent district courts could have exercised their discretion to award billions more or billions less to class action lawyers, district courts have been delegated a great deal of leeway over a big chunk of our regulatory horsepower. It is therefore worth examining how district courts exercise their discretion over fees. This examination is particularly important in cases where district courts use the percentage-of-the-settlement method to award fees: not only do such cases comprise the vast majority of settlements, but they comprise the vast majority of the money awarded as fees. As such, the analysis that follows will be confined to the 444 settlements where the district courts used the percentage-of-the-settlement method.

As I noted, prior empirical studies have shown that fee percentages are strongly and inversely related to the size of the settlement both in securities fraud and other cases. As shown in Figure 6, the 2006–2007 data are consistent with prior studies. Regression analysis, set forth in more detail below, confirms that after controlling for other variables, fee percentage is strongly and inversely associated with settlement size among all cases, among securities cases, and among all nonsecurities cases.

⁸²See, e.g., Samuel Issacharoff, *Regulating after the Fact*, 56 DePaul L. Rev. 375, 377 (2007).

Figure 6: Fee awards as a function of settlement size in 2006–2007 class action cases using the percentage-of-the-settlement method with or without lodestar cross-check.

SOURCES: Westlaw, PACER, district court clerks’ offices.

As noted above, courts often look to fee percentages in other cases as one factor they consider in deciding what percentage to award in a settlement at hand. In light of this practice, and in light of the fact that the size of the settlement has such a strong relationship to fee percentages, scholars have tried to help guide the practice by reporting the distribution of fee percentages across different settlement sizes.⁸³ In Table 10, I follow the Eisenberg-Miller studies and attempt to contribute to this guidance by setting forth the mean and median fee percentages, as well as the standard deviation, for each decile of the 2006–2007 settlements in which courts used the percentage-of-the-settlement method to award fees. The mean percentages ranged from over 28 percent in the first decile to less than 19 percent in the last decile.

It should be noted that the last decile in Table 10 covers an especially wide range of settlements, those from \$72.5 million to the Enron settlement of \$6.6 billion. To give more meaningful data to courts that must award fees in the largest settlements, Table 11 shows the last decile broken into additional cut points. When both Tables 10 and 11 are examined together, it appears that fee percentages tended to drift lower at a fairly slow pace until a settlement size of \$100 million was reached, at which point the fee percentages plunged well below 20 percent, and by the time \$500 million was reached, they plunged well below 15 percent, with most awards at that level under even 10 percent.

⁸³See Eisenberg & Miller II, *supra* note 16, at 265.

Table 10: Mean, Median, and Standard Deviation of Fee Awards by Settlement Size in 2006–2007 Federal Class Action Settlements Using the Percentage-of-the-Settlement Method With or Without Lodestar Cross-Check

<i>Settlement Size (in Millions)</i>	<i>Mean</i>	<i>Median</i>	<i>SD</i>
[\$0 to \$0.75] (<i>n</i> = 45)	28.8%	29.6%	6.1%
(\$0.75 to \$1.75] (<i>n</i> = 44)	28.7%	30.0%	6.2%
(\$1.75 to \$2.85] (<i>n</i> = 45)	26.5%	29.3%	7.9%
(\$2.85 to \$4.45] (<i>n</i> = 45)	26.0%	27.5%	6.3%
(\$4.45 to \$7.0] (<i>n</i> = 44)	27.4%	29.7%	5.1%
(\$7.0 to \$10.0] (<i>n</i> = 43)	26.4%	28.0%	6.6%
(\$10.0 to \$15.2] (<i>n</i> = 45)	24.8%	25.0%	6.4%
(\$15.2 to \$30.0] (<i>n</i> = 46)	24.4%	25.0%	7.5%
(\$30.0 to \$72.5] (<i>n</i> = 42)	22.3%	24.9%	8.4%
(\$72.5 to \$6,600] (<i>n</i> = 45)	18.4%	19.0%	7.9%

SOURCES: Westlaw, PACER, district court clerks’ offices.

Prior empirical studies have not examined whether fee awards are associated with the political affiliation of the district court judges making the awards. This is surprising because realist theories of judicial behavior would predict that political affiliation would influence fee decisions.⁸⁴ It is true that as a general matter, political affiliation may influence district court judges to a lesser degree than it does appellate judges (who have been the focus of most of the prior empirical studies of realist theories): district court judges decide more routine cases and are subject to greater oversight on appeal than appellate judges. On the other hand, class action settlements are a bit different in these regards than many other decisions made by district court judges. To begin with, class action settlements are almost never appealed, and when they are, the appeals are usually settled before the appellate court hears the case.⁸⁵ Thus, district courts have much less reason to worry about the constraint of appellate review in fashioning fee awards. Moreover, one would think the potential for political affiliation to influence judicial decision making is greatest when legal sources lead to indeterminate outcomes and when judicial decisions touch on matters that are salient in national politics. (The more salient a matter is, the more likely presidents will select judges with views on the matter and the more likely those views will diverge between Republicans and Democrats.) Fee award decisions would seem to satisfy both these criteria. The law of fee awards, as explained above, is highly discretionary, and fee award decisions are wrapped up in highly salient political issues such as tort reform and the relative power of plaintiffs' lawyers and corporations. I would expect to find that judges appointed by Democratic presidents awarded higher fees in the 2006–2007 settlements than did judges appointed by Republican presidents.

The data, however, do not appear to bear this out. Of the 444 fee awards using the percentage-of-the-settlement approach, 52 percent were approved by Republican appointees, 45 percent were approved by Democratic appointees, and 4 percent were approved by non-Article III judges (usually magistrate judges). The mean fee percentage approved by Republican appointees (25.6 percent) was slightly *greater* than the mean approved by Democratic appointees (24.9 percent). The medians (25 percent) were the same.

To examine whether the realist hypothesis fared better after controlling for other variables, I performed regression analysis of the fee percentage data for the 427 settlements approved by Article III judges. I used ordinary least squares regression with the dependent variable the percentage of the settlement that was awarded in fees.⁸⁶ The independent

⁸⁴See generally C.K. Rowland & Robert A. Carp, *Politics and Judgment in Federal District Courts* (1996). See also Max M. Schanzbach & Emerson H. Tiller, *Reviewing the Sentencing Guidelines: Judicial Politics, Empirical Evidence, and Reform*, 75 U. Chi. L. Rev. 715, 724–25 (2008).

⁸⁵See Brian T. Fitzpatrick, *The End of Objector Blackmail?* 62 Vand. L. Rev. 1623, 1640, 1634–38 (2009) (finding that less than 10 percent of class action settlements approved by federal courts in 2006 were appealed by class members).

⁸⁶Professors Eisenberg and Miller used a square root transformation of the fee percentages in some of their regressions. I ran all the regressions using this transformation as well and it did not appreciably change the results. I also ran the regressions using a natural log transformation of fee percentage and with the dependent variable natural log of the fee amount (as opposed to the fee percentage). None of these models changed the results

variables were the natural log of the amount of the settlement, the natural log of the age of the case (in days), indicator variables for whether the class was certified as a settlement class, for litigation subject areas, and for circuits, as well as indicator variables for whether the judge was appointed by a Republican or Democratic president and for the judge's race and gender.⁸⁷

The results for five regressions are in Table 12. In the first regression (Column 1), only the settlement amount, case age, and judge's political affiliation, gender, and race were included as independent variables. In the second regression (Column 2), all the independent variables were included. In the third regression (Column 3), only securities cases were analyzed, and in the fourth regression (Column 4), only nonsecurities cases were analyzed.

In none of these regressions was the political affiliation of the district court judge associated with fee percentage in a statistically significant manner.⁸⁸ One possible explanation for the lack of evidence for the realist hypothesis is that district court judges elevate other preferences above their political and ideological ones. For example, district courts of both political stripes may succumb to docket-clearing pressures and largely rubber stamp whatever fee is requested by class counsel; after all, these requests are rarely challenged by defendants. Moreover, if judges award class counsel whatever they request, class counsel will not appeal and, given that, as noted above, class members rarely appeal settlements (and when they do, often settle them before the appeal is heard),⁸⁹ judges can thereby virtually guarantee there will be no appellate review of their settlement decisions. Indeed, scholars have found that in the vast majority of cases, the fees ultimately awarded by federal judges are little different than those sought by class counsel.⁹⁰

Another explanation for the lack of evidence for the realist hypothesis is that my data set includes both unpublished as well as published decisions. It is thought that realist theories of judicial behavior lose force in unpublished judicial decisions. This is the case because the kinds of questions for which realist theories would predict that judges have the most room to let their ideologies run are questions for which the law is ambiguous; it is

appreciably. The regressions were also run with and without the 2006 Enron settlement because it was such an outlier (\$6.6 billion); the case did not change the regression results appreciably. For every regression, the data and residuals were inspected to confirm the standard assumptions of linearity, homoscedasticity, and the normal distribution of errors.

⁸⁷Prior studies of judicial behavior have found that the race and sex of the judge can be associated with his or her decisions. See, e.g., Adam B. Cox & Thomas J. Miles, *Judging the Voting Rights Act*, 108 *Colum. L. Rev.* 1 (2008); Donald R. Songer et al., *A Reappraisal of Diversification in the Federal Courts: Gender Effects in the Courts of Appeals*, 56 *J. Pol.* 425 (1994).

⁸⁸Although these coefficients are not reported in Table 8, the gender of the district court judge was never statistically significant. The race of the judge was only occasionally significant.

⁸⁹See Fitzpatrick, *supra* note 85, at 1640.

⁹⁰See Eisenberg & Miller II, *supra* note 16, at 270 (finding that state and federal judges awarded the fees requested by class counsel in 72.5 percent of settlements); Eisenberg, Miller & Perino, *supra* note 9, at 22 ("judges take a light touch when it comes to reviewing fee requests").

Table 12: Regression of Fee Percentages in 2006–2007 Settlements Using Percentage-of-the-Settlement Method With or Without Lodestar Cross-Check

<i>Independent Variable</i>	<i>Regression Coefficients (and Robust t Statistics)</i>

NOTE: **significant at the 5 percent level; *significant at the 10 percent level. Standard errors in Column 1 were clustered by circuit. Indicator variables for race and gender were included in each regression but not reported. SOURCES: Westlaw, PACER, district court clerks’ offices, Federal Judicial Center.

thought that these kinds of questions are more often answered in published opinions.⁹¹ Indeed, most of the studies finding an association between ideological beliefs and case outcomes were based on data sets that included only published opinions.⁹² On the other hand, there is a small but growing number of studies that examine unpublished opinions as well, and some of these studies have shown that ideological effects persisted.⁹³ Nonetheless, in light of the discretion that judges exercise with respect to fee award decisions, it hard to characterize *any* decision in this area as “unambiguous.” Thus, even when unpublished, I would have expected the fee award decisions to exhibit an association with ideological beliefs. Thus, I am more persuaded by the explanation suggesting that judges are more concerned with clearing their dockets or insulating their decisions from appeal in these cases than with furthering their ideological beliefs.

In all the regressions, the size of the settlement was strongly and inversely associated with fee percentages. Whether the case was certified as a settlement class was not associated

⁹²Id. at 178–79.

⁹³See, e.g., David S. Law, Strategic Judicial Lawmaking: Ideology, Publication, and Asylum Law in the Ninth Circuit, 73 U. Cin. L. Rev. 817, 843 (2005); Deborah Jones Merritt & James J. Brudney, Stalking Secret Law: What Predicts Publication in the United States Courts of Appeals, 54 Vand. L. Rev. 71, 109 (2001); Donald R. Songer, Criteria for Publication of Opinions in the U.S. Courts of Appeals: Formal Rules Versus Empirical Reality, 73 Judicature 307, 312 (1990). At the trial court level, however, the studies of civil cases have found no ideological effects. See Laura Beth Nielsen, Robert L. Nelson & Ryon Lancaster, Individual Justice or Collective Legal Mobilization? Employment Discrimination Litigation in the Post Civil Rights United States, 7 J. Empirical Legal Stud. 175, 192–93 (2010); Denise M. Keele et al., An Analysis of Ideological Effects in Published Versus Unpublished Judicial Opinions, 6 J. Empirical Legal Stud. 213, 230 (2009); Orley Ashenfelter, Theodore Eisenberg & Stewart J. Schwab, Politics and the Judiciary: The Influence of Judicial Background on Case Outcomes, 24 J. Legal Stud. 257, 276–77 (1995). With respect to criminal cases, there is at least one study at the trial court level that has found ideological effects. See Schanzenbach & Tiller, *supra* note 81, at 734.

with fee percentages in any of the regressions. The age of the case at settlement was associated with fee percentages in the first two regressions, and when the settlement class variable was removed in regressions 3 and 4, the age variable became positively associated with fee percentages in nonsecurities cases but remained insignificant in securities cases. Professors Eisenberg and Miller likewise found that the age of the case at settlement was positively associated with fee percentages in their 1993–2002 data set,⁹⁴ and that settlement classes were not associated with fee percentages in their 2003–2008 data set.⁹⁵

Although the structure of these regressions did not permit extensive comparisons of fee awards across different litigation subject areas, fee percentages appeared to vary somewhat depending on the type of case that settled. Securities cases were used as the baseline litigation subject area in the second and fifth regressions, permitting a comparison of fee awards in each nonsecurities area with the awards in securities cases. These regressions show that awards in a few areas, including labor/employment and antitrust, were more lucrative than those in securities cases. In the fourth regression, which included only nonsecurities cases, labor and employment cases were used as the baseline litigation subject area, permitting comparison between fee percentages in that area and the other nonsecurities areas. This regression shows that fee percentages in several areas, including consumer and employee benefits cases, were lower than the percentages in labor and employment cases.

In the fifth regression (Column 5 of Table 12), I attempted to discern whether the circuits identified in Section III as those with the most overrepresented (the First, Second, Seventh, and Ninth) and underrepresented (the Fifth and Eighth) class action dockets awarded attorney fees differently than the other circuits. That is, perhaps district court judges in the First, Second, Seventh, and Ninth Circuits award greater percentages of class action settlements as fees than do the other circuits, whereas district court judges in the Fifth and Eighth Circuits award smaller percentages. To test this hypothesis, in the fifth regression, I included indicator variables only for the six circuits with unusual dockets to measure their fee awards against the other six circuits combined. The regression showed statistically significant association with fee percentages for only two of the six unusual circuits: the Second and Ninth Circuits. In both cases, however, the direction of the association (i.e., the Second and Ninth Circuits awarded *smaller* fees than the baseline circuits) was opposite the hypothesized direction.⁹⁶

⁹⁴See Eisenberg & Miller, *supra* note 15, at 61.

⁹⁵See Eisenberg & Miller II, *supra* note 16, at 266.

⁹⁶This relationship persisted when the regressions were rerun among the securities and nonsecurities cases separately. I do not report these results, but, even though the First, Second, and Ninth Circuits were oversubscribed with securities class action settlements and the Fifth, Sixth, and Eighth were undersubscribed, there was no association between fee percentages and any of these unusual circuits except, again, the inverse association with the Second and Ninth Circuits. In nonsecurities cases, even though the Seventh and Ninth Circuits were oversubscribed and the Fifth and the Eighth undersubscribed, there was no association between fee percentages and any of these unusual circuits except again for the inverse association with the Ninth Circuit.

The lack of the expected association with the unusual circuits might be explained by the fact that class action lawyers forum shop along dimensions other than their potential fee awards; they might, for example, put more emphasis on favorable class-certification law because there can be no fee award if the class is not certified. As noted above, it might also be the case that class action lawyers are unable to engage in forum shopping at all because defendants are able to transfer venue to the district in which they are headquartered or another district with a significant connection to the litigation.

It is unclear why the Second and Ninth Circuits were associated with lower fee awards despite their heavy class action dockets. Indeed, it should be noted that the Ninth Circuit was the baseline circuit in the second, third, and fourth regressions and, in all these regressions, district courts in the Ninth Circuit awarded smaller fees than courts in many of the other circuits. The lower fees in the Ninth Circuit may be attributable to the fact that it has adopted a presumption that the proper fee to be awarded in a class action settlement is 25 percent of the settlement.⁹⁷ This presumption may make it more difficult for district court judges to award larger fee percentages. The lower awards in the Second Circuit are more difficult to explain, but it should be noted that the difference between the Second Circuit and the baseline circuits went away when the fifth regression was rerun with only nonsecurities cases.⁹⁸ This suggests that the awards in the Second Circuit may be lower *only* in securities cases. In any event, it should be noted that the lower fee awards from the Second and Ninth Circuits contrast with the findings in the Eisenberg-Miller studies, which found no intercircuit differences in fee awards in common-fund cases in their data through 2008.⁹⁹

V. CONCLUSION

This article has attempted to fill some of the gaps in our knowledge about class action litigation by reporting the results of an empirical study that attempted to collect all class action settlements approved by federal judges in 2006 and 2007. District court judges approved 688 class action settlements over this two-year period, involving more than \$33 billion. Of this \$33 billion, nearly \$5 billion was awarded to class action lawyers, or about 15 percent of the total. District courts typically awarded fees using the highly discretionary percentage-of-the-settlement method, and fee awards varied over a wide range under this method, with a mean and median around 25 percent. Fee awards using this method were strongly and inversely associated with the size of the settlement. Fee percentages were positively associated with the age of the case at settlement. Fee percentages were not associated with whether the class action was certified as a settlement class or with the

⁹⁷See note 75 *supra*. It should be noted that none of the results from the previous regressions were affected when the Ninth Circuit settlements were excluded from the data.

⁹⁸The Ninth Circuit's differences persisted.

⁹⁹See Eisenberg & Miller II, *supra* note 16, at 260.

political affiliation of the judge who made the award. Finally, there appeared to be some variation in fee percentages depending on subject matter of the litigation and the geographic circuit in which the district court was located. Fee percentages in securities cases were lower than the percentages in some but not all of the other litigation areas, and district courts in the Ninth Circuit and in the Second Circuit (in securities cases) awarded lower fee percentages than district courts in several other circuits. The lower awards in the Ninth Circuit may be attributable to the fact that it is the only circuit that has adopted a presumptive fee percentage of 25 percent.
